The fascinating and surprising history of English spelling from David Crystal, everyone's favorite expert logophile With *The Story of English in 100 Words*, David Crystal took us on a tour through the history of our language. Now, with *Spell It Out*, he takes on the task of answering all the questions about how we spell: "Why is English spelling so difficult?" Or "Why are good spellers so proud of their achievement that when they see a misspelling they condemn the writer as sloppy, lazy, or uneducated?" In thirty-seven short, engaging and informative chapters, Crystal takes readers on a history of English spelling, starting with the Roman missionaries' sixth century introduction of the Roman alphabet and ending with where the language might be going. He looks individually at each letter in the alphabet and its origins. He considers the question of vowels and how people developed a way to tell whether or not it was long or short. He looks at influences from other cultures, and explains how English speakers understood that the "o" in "hopping" was a short vowel, rather than the long vowel of "hoping". If you've ever asked yourself questions like "Why do the words "their", "there" and "they're" sound alike, but mean very different things?" or "How can we tell the difference between "charge" the verb and "charge" the noun?" David Crystal's *Spell It Out* will spell it all out for you. *Spectrum Spelling* brings curriculum content reading passages to life! The lessons, perfect for students in grade 2, strengthen spelling skills by focusing on vowel pairs, alphabetization, silent consonants, proofreading, blends, rhyming words, and more! **E** This book is a collection of nearly 175 documents?from saints, emperors, philosophers, satirists, inscriptions, graffiti, and other interesting types?that sheds light on the complex fabric of religious belief as it changed from a variety of non-Judeo-Christian movements to Christian in late antiquity. These texts illuminate and bring to life the bizarre and the banal of the social world of the Roman Empire, the world in which Christianity ultimately gained preeminence. This treasury of texts leads the reader through the matrix of beliefs among which Christianity grew. It includes both Christian and non-Christian sources, avoiding a common but obscuring division between the two. The material is presented as one single flow that satisfies natural curiosity and whets the reader's appetite for more. Brief explanatory introductions to the documents are included. Vols. for 1866-70 include *Proceedings of the American Normal School Association*; 1866-69 include *Proceedings of the National Association of School Superintendents*; 1870 includes *Addresses and journal of proceedings of the Central College Association*. Close attention is paid to the linguistic features that characterize these varieties, with in-depth discussions of lexical, morpho-syntactic, orthographic, and metrical variation, as well as the interrelationship between these different types of variation. The volume thus offers valuable insights into the nature of Post-classical and Byzantine Greek, laying the foundation for future studies of linguistic variation in these later stages of the language, while at the same time providing a point of comparison for Classical Greek scholarship *The Little Gold Grammar Book* helps readers build essential grammar and writing skills and is suitable for the everyday student, test-prep candidate, or working professional in need of a refresher course. This book is a compilation of a selected subset of research articles presented at the Eighth INFORMS Computing Society Conference, held in Chandler, Arizona, from January 8 to 10, 2003. The articles in this book represent the diversity and depth of the interface between ORiMS (operations research and the management sciences) and CS/AI (computer science and artificial intelligence). This volume starts with two papers that represent the reflective and integrative thinking that is critical to any scientific discipline. These two articles present philosophical perspectives on computation, covering a variety of traditional and newer methods for modeling, solving, and explaining mathematical models. The next set includes articles that study machine learning and computational heuristics, and is followed by articles that address issues in performance testing of solution algorithms and heuristics. These two sets of papers demonstrate the richness of thought that takes place at the ORiMS and CSI AI interface. The final set of articles demonstrates the usefulness of these and other methods at the interface towards solving problems in the real world, covering e-commerce, workflow, electronic negotiation, music, parallel computation, and telecommunications. The articles in this collection represent the results of cross-fertilization between ORiMS and CSI AI, making possible advances that could have not been achieved in isolation. The continuing aim of the INFORMS Computing Society and this research conference is to invigorate and further develop this interface. At the end of several of his letters the apostle Paul claims to be penning a summary and farewell greeting in his own hand: 1 Corinthians, Galatians, Philemon, cf. Colossians, 2 Thessalonians. Paul's claims raise some interesting questions about his letter-writing practices. Did he write any complete letters himself, or did he always dictate to a scribe? How much did his scribes contribute to the composition of his letters? Did Paul make the effort to proofread and correct what he had dictated? What was the purpose of Paul's autographic subscriptions? What was Paul's purpose in calling attention to their autographic nature? Why did Paul write in large letters in the subscription of his letter to the Galatians? Why did he call attention to this peculiarity of his handwriting? A good source of answers to these questions can be found among the primary documents that have survived from around the time of Paul, a large number of which have been discovered over the past two centuries and in fact continue to be discovered to this day. From around the time of Paul there are extant several dozen letters from the caves and refuges in the desert of eastern Judaea (in Hebrew, Aramaic, Nabataean, Greek, and Latin), several hundred from the remains of a Roman military camp in Vindolanda in northern England (in Latin), and several thousand from the sands of

Middle and Upper Egypt (in Greek, Latin, and Egyptian Demotic). Reece has examined almost all these documents, many of them unpublished and rarely read, with special attention to their handwriting styles, in order to shed some light on these technical aspects of Paul's letter-writing conventions.
