2020 International Conference on Systems, Signals and Image Processing (IWSSIP) Jun 16 2022 The IWSSIP is a scientific event meant to stir the research in theory, methodology, systems and applications of signal and image processing, and to attract and stimulate young researchers

Forthcoming Networks and Sustainability in the IoT Era Oct 28 2020 This book aims to provide a platform to the researchers and practitioners from both academia and industry to meet and share their experience and knowledge. Forthcoming Networks and Sustainability in the IoT Era (FoNeS-IoT), Volume 1 & 2, aims to bring together

researchers and professionals to exchange ideas on the advancements in technology, application areas for advanced communication systems and development of new services, and facilitate a tremendous growth of new devices and smart things that need to be connected to the Internet through a variety of wireless technologies. Parallel to this, new capabilities such as pervasive sensing, multimedia sensing, machine learning, deep learning, unmanned aerial vehicles, cloud and edge computing, energy efficiency/harvesting, and computing power open the way to new domains, services, and business models beyond the traditional mobile Internet. The new areas in turn come with

various requirements in terms of reliability, quality of service, and energy efficiency. These are only some examples of the challenges that are of interest to researchers in *Forthcoming Networks and Sustainability in the IoT Era (FoNeS-IoT)*. It will explore the latest developments, innovations, and best practices within the IoT and the impact it has on industries including: manufacturing, transport, supply chain, communication, government, legal sectors, financial services, energy utilities, insurance, health care, retail, and many others. It provides opportunities for academicians and scientists along with professionals, policymakers, and practitioners from various fields in a global realm to present their research, contributions, and views, on one forum, and interact with members inside and outside their own particular disciplines. Papers describing applications of IoT in e-Health, Smart Systems & Management, Communication, and Education are also included, but the focus is mainly on how

data-proxy.asn-online.org

new and novel techniques advance the performance in application areas, rather than a presentation of yet another application of conventional tool. Papers on such applications describe a principled solution, emphasize its novelty, and present an in-depth evaluation of the techniques being exploited.

Development of a Networked Thumb Print-Based Staff Attendance System Nov 09 2021 As a means to solve problems associated with staff attendance management, this book attempts to design and implement a networked thumb-print based attendance system for employee's management in organizations, institutions, etc. In other to achieve the stated aim, this book employs biometric technology for its implementation. The new proposed system is more efficient to the traditional manual attendance system.

Advances in Automation, Signal Processing, Instrumentation, and Control Jan 31 2021 This book presents the select proceedings of the

International Conference on Automation, Signal Processing, Instrumentation and Control (i-CASIC) 2020. The book mainly focuses on emerging technologies in electrical systems, IoT-based instrumentation, advanced industrial automation, and advanced image and signal processing. It also includes studies on the analysis, design and implementation of instrumentation systems, and high-accuracy and energy-efficient controllers. The contents of this book will be useful for beginners, researchers as well as professionals interested in instrumentation and control, and other allied fields.

[IoT and Analytics for Sensor Networks](#) Dec 18 2019 This book includes high-quality research papers presented at the 1st International Conference on Wireless Sensor Networks, Ubiquitous Computing and Applications (ICWSNUCA, 2021), which is held at Gokaraju Rangaraju Institute of Engineering and Technology, Hyderabad, India, during 26-27

February, 2021. This volume focuses on the applications, use-cases, architectures, deployments, and recent advances of wireless sensor networks as well as ubiquitous computing. Different research topics are illustrated in this book, like wireless sensor networks for the Internet of Things; IoT applications for eHealth; smart cities; architectures for WSNs and IoT, WSNs hardware and new devices; low-power wireless technologies; wireless ad hoc sensor networks; routing and data transfer in WSNs; multicast communication in WSNs; security management in WSNs and in IoT systems; and power consumption optimization in WSNs. *Software Engineering Perspectives in Intelligent Systems* Jun 23 2020 This book constitutes the refereed proceedings of the 4th Computational Methods in Systems and Software 2020 (CoMeSySo 2020) proceedings. Software engineering, computer science and artificial intelligence are crucial topics for the research within an intelligent systems problem domain.

The CoMeSySo 2020 conference is breaking the barriers, being held online. CoMeSySo 2020 intends to provide an international forum for the discussion of the latest high-quality research results.

Smkdiy Attendance Management System with Sms Service May 15 2022 SMKDIY Attendance Management System with SMS Service (SMKDIY AMSSS) is build to facilitate the attendance management system in Sekolah Menengah Kebangsaan Dato' Ibrahim Yaacob (SMKDIY) that are still using manual system. Manual attendance system left a lot of holes in effectiveness. Missing records, papers consumption and tardy reports are some of the obvious one. Student's truancy is one of the indirect results from the current system. Hence, this system existed to convert all the manual system to a computerize one. Other than that the system also can provide SMS alert and generate informative reports for school monitoring. Prototype model is used for the development of

the system as the model can elicit user's requirements faster, and can detect defects earlier thus reducing the time and cost. For the development PHP language is used, and for the database is mySQL. Meanwhile for the hardware, Adobe Dreamweaver CS4 and Android SDK are employed for the web based and mobile based system. After completion, the system consists of a web based, a mobile application and SMS services. It is successfully used to facilitate attendance management by making the process faster, easier date retrieval and also ease the usage of paper in the office.

Proceedings of the Global AI Congress 2019

Dec 30 2020 This book gathers high-quality research papers presented at the Global AI Congress 2019, which was organized by the Institute of Engineering and Management, Kolkata, India, on 12-14 September 2019. Sharing contributions prepared by researchers, practitioners, developers and experts in the areas of artificial intelligence, the book covers

the areas of AI for E-commerce and web applications, AI and sensors, augmented reality, big data, brain computing interfaces, computer vision, cognitive radio networks, data mining, deep learning, expert systems, fuzzy sets and systems, image processing, knowledge representation, nature-inspired computing, quantum machine learning, reasoning, robotics and autonomous systems, robotics and the IoT, social network analysis, speech processing, video processing, and virtual reality.

Information and Communication

Technology for Intelligent Systems Jan 11 2022 This book gathers papers addressing state-of-the-art research in all areas of information and communication technologies and their applications in intelligent computing, cloud storage, data mining and software analysis. It presents the outcomes of the Fourth International Conference on Information and Communication Technology for Intelligent Systems, which was held in Ahmedabad, India.

data-proxy.asn-online.org

Divided into two volumes, the book discusses the fundamentals of various data analysis techniques and algorithms, making it a valuable resource for researchers and practitioners alike.

Application of Intelligent Systems in Multi-modal Information Analytics Feb 12 2022

This book provides comprehensive coverage of the latest advances and trends in information technology, science, and engineering. Specifically, it addresses a number of broad themes, including multimodal informatics, data mining, agent-based and multi-agent systems for health and education informatics, which inspire the development of intelligent information technologies. The contributions cover a wide range of topics such as AI applications and innovations in health and education informatics; data and knowledge management; multimodal application management; and web/social media mining for multimodal informatics. Outlining promising future research directions, the book is a valuable resource for students, researchers, and professionals and a useful reference guide for newcomers to the field. This book is a compilation of the papers presented in the 4th International Conference on Multi-modal

Information Analytics, held online, on April 23, 2022.

First International Conference on Artificial Intelligence and Cognitive Computing Oct 16 2019 This book presents original research works by researchers, engineers and practitioners in the field of artificial intelligence and cognitive computing. The book is divided into two parts, the first of which focuses on artificial intelligence (AI), knowledge representation, planning, learning, scheduling, perception-reactive AI systems, evolutionary computing and other topics related to intelligent systems and computational intelligence. In turn, the second part focuses on cognitive computing, cognitive science and cognitive informatics. It also discusses applications of cognitive computing in medical informatics, structural health monitoring, computational intelligence, intelligent control systems, bio-informatics, smart manufacturing, smart grids, image/video processing, video analytics, medical image and

signal processing, and knowledge engineering, as well as related applications.

Convergence of Deep Learning in Cyber-IoT Systems and Security Aug 26 2020

CONVERGENCE OF DEEP LEARNING IN CYBER-IOT SYSTEMS AND SECURITY In-depth analysis of Deep Learning-based cyber-IoT systems and security which will be the industry leader for the next ten years. The main goal of this book is to bring to the fore unconventional cryptographic methods to provide cyber security, including cyber-physical system security and IoT security through deep learning techniques and analytics with the study of all these systems. This book provides innovative solutions and implementation of deep learning-based models in cyber-IoT systems, as well as the exposed security issues in these systems. The 20 chapters are organized into four parts. Part I gives the various approaches that have evolved from machine learning to deep learning. Part II presents many innovative solutions,

algorithms, models, and implementations based on deep learning. Part III covers security and safety aspects with deep learning. Part IV details cyber-physical systems as well as a discussion on the security and threats in cyber-physical systems with probable solutions. Audience Researchers and industry engineers in computer science, information technology, electronics and communication, cybersecurity and cryptography. *Evolutionary Computing and Mobile Sustainable Networks* Jan 19 2020 This book mainly reflects the recent research works in evolutionary computation technologies and mobile sustainable networks with a specific focus on computational intelligence and communication technologies that widely ranges from theoretical foundations to practical applications in enhancing the sustainability of mobile networks. Today, network sustainability has become a significant research domain in both academia and industries present across the globe. Also, the network sustainability paradigm has

generated a solution for existing optimization challenges in mobile communication networks. Recently, the research advances in evolutionary computing technologies including swarm intelligence algorithms and other evolutionary algorithm paradigms are considered as the widely accepted descriptors for mobile sustainable networks virtualization, optimization, and automation. To deal with the emerging impacts on mobile communication networks, this book discusses about the state-of-the-research works on developing a sustainable design and their implementation in mobile networks. With the advent of evolutionary computation algorithms, this book contributes varied research chapters to develop a new perspective on mobile sustainable networks. *Advances in Production Management Systems: Innovative and Knowledge-Based Production Management in a Global-Local World* Sep 07 2021 The three volumes IFIP AICT 438, 439, and 440 constitute the refereed proceedings of the

International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2014, held in Ajaccio, France, in September 2014. The 233 revised full papers were carefully reviewed and selected from 271 submissions. They are organized in 6 parts: knowledge discovery and sharing; knowledge-based planning and scheduling; knowledge-based sustainability; knowledge-based services; knowledge-based performance improvement, and case studies.

Proceedings of International Conference on Emerging Technologies and Intelligent Systems Mar 13 2022 This book sheds light on the emerging research trends in intelligent systems and their applications. It mainly focuses on four different themes, including Artificial Intelligence and Soft Computing, Information Security and Networking, Medical Informatics, and Advances in Information Systems. Each chapter contributes to the aforementioned themes by discussing the recent design, developments, and

modifications of intelligent systems and their applications.

Advances in Manufacturing Technology and Management Apr 21 2020 This book presents the select peer-reviewed proceeding of the International Conference on Advanced Production and Industrial Engineering (ICAPIE) - 2021 held at Delhi Technological University. It covers recent trends in various fields of mechanical engineering. The broad range of topics and issues covered include mechanical system engineering, materials engineering, micro-machining, renewable energy, industrial engineering and additive manufacturing. This book will be useful for students, researchers and professionals working in the area of mechanical and allied engineering discipline.

Critical Socio-Technical Issues Surrounding Mobile Computing Nov 16 2019 As lifestyles in personal and public spheres become more fast-paced and hectic, the need for reliable mobile technologies becomes increasingly important.

Insights into the various impacts of mobile applications pave the way for future advances and developments in communication and interaction. *Critical Socio-Technical Issues Surrounding Mobile Computing* is a pivotal reference source for research-based perspectives on the use and application of mobile technology in modern society. Featuring extensive research on a variety of topics relating to the social, technical, and behavioral perspectives of mobile applications, this book is an essential reference source for mobile application developers, instructors, practitioners, and students interested in current research on the impact of mobile devices on individuals and society as a whole.

Techno-Societal 2020 Feb 18 2020 This book, divided in two volumes, originates from Techno-Societal 2020: the 3rd International Conference on Advanced Technologies for Societal Applications, Maharashtra, India, that brings together faculty members of various engineering

colleges to solve Indian regional relevant problems under the guidance of eminent researchers from various reputed organizations. The focus of this volume is on technologies that help develop and improve society, in particular on issues such as sensor and ICT based technologies for the betterment of people, Technologies for agriculture and healthcare, micro and nano technological applications. This conference aims to help innovators to share their best practices or products developed to solve specific local problems which in turn may help the other researchers to take inspiration to solve problems in their region. On the other hand, technologies proposed by expert researchers may find applications in different regions. This offers a multidisciplinary platform for researchers from a broad range of disciplines of Science, Engineering and Technology for reporting innovations at different levels. Proceedings of the International Conference on Recent Cognizance in Wireless Communication

data-proxy.asn-online.org

& Image Processing Jul 25 2020 This volume comprises the proceedings of the International Conference on Recent Cognizance in Wireless Communication & Image Processing. It brings together content from academicians, researchers, and industry experts in areas of Wireless Communication and Image Processing. The volume provides a snapshot of current progress in computational creativity and a glimpse of future possibilities. The proceedings include two kinds of paper submissions: (i) regular papers addressing foundation issues, describing original research on creative systems development and modeling; and (ii) position papers describing work-in-progress or research directions for computational creativity. This work will be useful to professionals and researchers working in the core areas of wireless communications and image processing. **Attendance Management System** Oct 20 2022 Large 8.5 Inches By 11 Inches Attendance Log Book. 100 pages of attendance records 30

RFID Based Systematic Student's Attendance Management System Feb 24

2023 Most educational institutions' administrators are concerned about student irregular attendance. Truancies can affect student overall academic performance. The conventional method of taking attendance by calling names or signing on paper is very time consuming and insecure, hence inefficient. Therefore, computer-based student attendance management system is required to assist the faculty and the lecturer for this time-consuming process. For this project, RFID based systematic student's attendance management system can provide much convenient method to take attendance, but some prerequisites has to be done before start using the program. Although the use of RFID systems in educational institutions is not new, it is intended to show how the use of it came to solve daily problems in our university. Assisted by the System

data-proxy.asn-online.org

Development Life Cycle (SDLC) methodology, the system has been built using the web-based applications such as JSP, MySQL and Apache to cater the recording and reporting of the students' attendances. NetBeans IDE 6.1 is used for developing the overall system, MySQL as the database and Java act as the scripting programming language. RFID Based Systematic Student's Attendance Management System was built using open source software and it will reduce the cost of development process. The system can be easily accessed by the lecturers via the web and most importantly, the reports can be generated in real-time processing, thus, providing valuable information about the students' commitments in attending the classes.

Mobile and Ubiquitous Systems: Computing, Networking and Services Jul 05 2021 This book constitutes the refereed post-conference proceedings of the 18th International Conference on Mobile and Ubiquitous Systems: Computing, Networking and Services, MobiQuitous 2021, which was held in November 2021. The conference was held virtually due to the COVID-19 pandemic. The 37 full papers were carefully reviewed and selected from 79 submissions and present discussions, interaction and exchange of experiences that will designate future research efforts and directions. Topics addressed by the conference include systems, applications, social networks, middleware, networking, sensing, data management, data processing and services, all with special focus on mobile and ubiquitous computing.

Why Use School Information Software? Jun 04 2021 For anyone involved in implementing or

upgrading a Student Information System (SIS), or for those who simply want to maximize the benefits of their existing SIS, this practical guide by noted expert Sue Lloyd is your first resource. *Why Use School Information Software?* answers many key questions school staff may have about their (SIS) software. In clear, direct language, Lloyd explains how to reduce the costs of data management and make staff training more effective. She highlights key concepts of SIS software and explores the following topics in-depth: Defining data management Working within a district Building your school's data foundation Constructing your staff resources Managing attendance data And much more In addition to Lloyd's own experience, she also uses real-life stories to demonstrate how schools have underestimated the costs of such SIS systems, and how this has negatively affected the district as a whole. Lloyd provides workable solutions to these dilemmas, and challenges educators and administrators to analyze how SIS systems

data-proxy.asn-online.org

impact leadership in education. Essential reading for teachers transitioning into administration as well as current administration officials, *Why Use School Information Software?* serves as an indispensable tool for the educational community.

Service Chain Management May 03 2021
Service chain management enables service organisations to improve customer satisfaction and reduce operational costs. In this book, Christos Voudouris and his BT colleagues together with experts from industry and academia present the latest innovations and technologies used to manage the operations of a service company. The viewpoints presented are based on the BT experience and on associated research and development. Service chain management is looked at both from the enterprise perspective and from the standpoints of the service professional and customer. The focus is on real-world challenges.

Progress in Behavior Modification Mar 21 2020

Progress in Behavior Modification, Volume 11 covers the developments in the study of behavior modification. The book discusses the pluralistic psychology of behavior change; the methodological issues in child behavior therapy; and the interpersonal-skills training with adolescents. The text also describes the behavior modification of work and work-related problems; the behavioral treatment of migraine and muscle-contraction headaches; and the modification of children's social withdrawal. An assessment of hyperactive children, with regard to the psychometric, methodological, and practical considerations, is considered. Psychologists, psychiatrists, and sociologists will find the book invaluable.

Advanced Computing, Networking and Informatics- Volume 1 Dec 10 2021 Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two-volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI). The two

data-proxy.asn-online.org

volumes together include 148 scholarly papers, which have been accepted for presentation from over 640 submissions in the second International Conference on Advanced Computing, Networking and Informatics, 2014, held in Kolkata, India during June 24-26, 2014. The first volume includes innovative computing techniques and relevant research results in informatics with selective applications in pattern recognition, signal/image processing and HCI. The second volume on the other hand demonstrates the possible scope of the computing techniques and informatics in wireless communications, networking and security.

Computer Architecture and Organization

May 23 2020 In today's workplace, computer and cybersecurity professionals must understand both hardware and software to deploy effective security solutions. This book introduces readers to the fundamentals of computer architecture and organization for security, and provides them

with both theoretical and practical solutions to design and implement secure computer systems. Offering an in-depth and innovative introduction to modern computer systems and patent-pending technologies in computer security, the text integrates design considerations with hands-on lessons learned to help practitioners design computer systems that are immune from attacks. Studying computer architecture and organization from a security perspective is a new area. There are many books on computer architectures and many others on computer security. However, books introducing computer architecture and organization with security as the main focus are still rare. This book addresses not only how to secure computer components (CPU, Memory, I/O, and network) but also how to secure data and the computer system as a whole. It also incorporates experiences from the author's recent award-winning teaching and research. The book also introduces the latest technologies, such as trusted computing, RISC-

V, QEMU, cache security, virtualization, cloud computing, IoT, and quantum computing, as well as other advanced computing topics into the classroom in order to close the gap in workforce development. The book is chiefly intended for undergraduate and graduate students in computer architecture and computer organization, as well as engineers, researchers, cybersecurity professionals, and middleware designers.

Attendance Management System Using PIID (AMSUPIID) Apr 14 2022 Class teacher need to take students' daily attendance for every school days and analyze of attendance data. It is hassle for teacher to make analysis of attendance data manually and ensure error prone in that process. Attendance Management System Using PIID (AMSUPIID) is proposed and will be implementing in Pahang religious schools under supervision of Jabatan Agama Islam Pahang (JAIP). PIID is a combination methodology of prototyping model and iterative and incremental

development. This is the methodology that used while developing the system. Using AMSUPIID, class teacher can use this system to record student attendance. In online web based application, teacher can record daily attendance and generate class attendance report by monthly or yearly. Guru Penolong Kanan (GPK) can generate school attendance report by monthly and the report need to send to the JAIP. Discipline teacher will use this system to view truancy statistic. In addition, the system will generate warning letter for those student. A SMS will be sent to parent's mobile phone to notify parent that the student do not come to school. The system is developed by using the Adobe Dreamweaver and XAMPP. By using this system, it helps the school to manage the student attendance.

Innovative Data Communication Technologies and Application Sep 26 2020

This book presents the latest research in the fields of computational intelligence, ubiquitous

computing models, communication intelligence, communication security, machine learning, informatics, mobile computing, cloud computing and big data analytics. The best selected papers, presented at the International Conference on Innovative Data Communication Technologies

and Application (ICIDCA 2020), are included in the book. The book focuses on the theory, design, analysis, implementation and applications of distributed systems and networks.
