The author discusses the identity of Hermes along with an analysis of Hermes' writings. Rhodes was founded more that 2,400 years ago, yet our fascination for this prosperous trading center continues across the millennia. One of the most beautiful cities ever built, Rhodes had a profound influence on the Roman, and subsequent western, civilization. Hellenistic Rhodes introduces the latest research carried out by European scholars. Individual chapters approach various aspects of the politics, culture and society of Rhodes and its sphere of influence from historical, archaeological and philosophical perspectives. These multidisciplinary essays center on the Rhodian demes, relations between Rhodes and the Rhodian Peraia, the relations between Rhodes and Caria, Rhodes and Lycia in Hellenistic times, the marginalization of Crete in Greek thought, the role of piracy in the outbreak of the First Cretan War, and the Eastern Mediterranean wine trade. Also considered is the evidence from Rhodian amphorae of the trade between Rhodes and Alexandria, pottery and jewelry from Rhodian graves and aspects of Rhodian tombs. A final essay discusses the importance of the transformation of stoicism by Panaetius and Posidonius. This final volume of the series Studies in Hellenistic Civilization continues the vibrant record of the contemporary interest in, and success with, uncovering the details of a remarkable time and place. "As the world's biodiversity faces the incessant threats of habitat loss, invasive species and climate change, there is an increasing need to consider more direct conservation interventions. Humans have moved organisms between sites for their own purposes for millennia, and this has yielded benefits for human kind, but in some cases has led to disastrous impacts. In response to this complex aspect of conservation management, the IUCN Species Survival Commission (SSC) Reintroduction Specialist Group (RSG) and Invasive Species Specialist Group (ISSG) have revised and published the IUCN 'Guidelines for Reintroductions and Other Conservation Translocations'"--Website. NUMEROUS volumes have been written as commentaries upon the secret systems of philosophy existing in the ancient world, but the ageless truths of life, like many of the earth's greatest thinkers, have usually been clothed in shabby garments. The present work is an attempt to supply a tome worthy of those seers and sages whose thoughts are the substance of its pages. To bring about this coalescence of Beauty and Truth has proved most costly, but I believe that the result will produce an effect upon the mind of the reader which will more than justify the expenditure. This volume deals with the depictions of animal sacrifice from ancient Greece, full catalogues of which are included. The relevant aspects of Greek sacrifice are studied on the basis of an analysis and interpretation of these representations, combined with the pertinent textual data. Since the publication of the best-selling, highly acclaimed first edition, the technology and clinical applications of medical imaging have changed significantly. Gathering these developments into one volume, Webb's Physics of Medical Imaging, Second Edition presents a thorough update of the basic physics, modern technology and many examples of clinical application across all the modalities of medical imaging. New to the Second Edition Extensive updates to all original chapters Coverage of state-of-the-art detector technology and computer processing used in medical imaging 11 new contributors in addition to the original team of authors Two new chapters on medical image processing and multimodality imaging More than 50 percent new examples and over 80 percent new figures Glossary of abbreviations, color insert and contents lists at the beginning of each chapter Keeping the material accessible to graduate students, this well-

illustrated book reviews the basic physics underpinning imaging in medicine. It covers the major techniques of x-radiology, computerised tomography, nuclear medicine, ultrasound and magnetic resonance imaging, in addition to infrared, electrical impedance and optical imaging. The text also describes the mathematics of medical imaging, image processing, image perception, computational requirements and multimodality imaging. SUPREME among the wonders of antiquity, unrivaled by the achievements of later architects and builders, the Great Pyramid of Gizeh bears mute witness to an unknown civilization which, having completed its predestined span, passed into oblivion. Eloquent in its silence, inspiring in its majesty, divine in its simplicity, the Great Pyramid is indeed a sermon in stone. Its magnitude overwhelms the puny sensibilities of man. Among the shifting sands of time it stands as a fitting emblem of eternity itself. Who were the illumined mathematicians who planned its parts and dimensions, the master craftsmen who supervised its construction, the skilled artisans who trued its blocks of stone? The oldest, the most profound, the most universal of all symbols is the human body. The Greeks, Persians, Egyptians, and Hindus considered a philosophical analysis of man's triune nature to be an indispensable part of ethical and religious training. The mysteries of every nation taught that the laws, elements, and powers of the universe were epitomized in the human constitution, that everything which existed outside of man had its analogue within man. Here, renowned scholar Manly P. Hall covers the symbolism of the human body from a variety of angles. He goes over various parts of the body and what different cultures throughout time have believed. He examines everything from our extremities and hands to our eyes, heart and brain. He touches on the ancient mysteries, the Greeks, early Christianity, the Hebrew Qabbalists, and much more. How many naturalists, geologists, zoologists, or botanists are asking one another today whether Plato has not transmitted to us, with slight amplification, a page from the actual history of mankind. No affirmation is yet permissible; but it seems more and more evident that a vast region, continental or made up of great islands, has collapsed west of the Pillars of Hercules, otherwise called the Strait of Gibraltar, and that its collapse occurred in the not far distant past. In any event, the question of Atlantis is placed anew before men of science; and since I do not believe that it can ever be solved without the aid of oceanography, I have thought it natural to discuss it here, in this temple of maritime science, and to call to such a problem, long scorned but now being revived, the attention of oceanographers, as well as the attention of those who, though immersed in the tumult of cities, lend an ear to the distant murmur of the sea. Mysterious bruises and significant pain plague Sybil as she tries to navigate a new world of magic. After attending a moon ritual hosted by her crush, Sadie, she slowly discovers that she now wields the power of a magic phrase, and anything she wants, can be hers. Just as her realization is taking hold, a dark witch called Luna, pretending to be her mentor, tries to steal her power. It's up to Sybil to work with her newly-formed coven to stop the dark witch from stealing the power and causing harm. Along the way she learns about betrayal, love, and the value of family and friendship. This richly illustrated book presents a straightforward non-instrumental method of clinical facial analysis in preparation for aesthetic surgery, orthognathic surgery, and orthodontic treatments. After discussion of various practical aspects of facial examination and photography, analysis of different regions of the face and dentofacial deformities is discussed in a series of detailed chapters. At the end of each of these chapters, multiple-choice checklists are included that will help the reader to perform step-by-step regional analysis. Important features of the book are its multidisciplinary approach and the emphasis placed on the relationship between different parts of the face. This second edition has been thoroughly updated and includes a new chapter on recording and documentation relating specifically to aesthetic facial surgery. This Open Access book is about the development of a common understanding of environmental citizenship. It conceptualizes and frames environmental citizenship taking an educational perspective. Organized in four complementary parts, the book first explains the political, economic and societal dimensions of the concept. Next, it examines environmental citizenship as a psychological concept with a specific focus on knowledge, values, beliefs and attitudes. It then explores environmental citizenship within the context of environmental education and education for sustainability. It elaborates responsible environmental behaviour, youth activism and education for sustainability through the lens of environmental citizenship. Finally, it discusses the concept within the context of different educational levels, such as primary and secondary education in formal and non-formal settings. Environmental citizenship is a key factor in sustainability, green and cycle economy, and low-carbon society, and an important aspect in addressing global environmental problems. It has been an influential concept in many different arenas such as economy, policy, philosophy, and organizational marketing. In the field of education, the concept could be better exploited and established, however. Education and, especially, environmental discourses in science education

have a great deal to contribute to the adoption and promotion of environmental citizenship. The common stereotype that lesbians and gay men are more affluent than heterosexuals is only one of many misconceptions that M. V. Lee Badgett debunks in this comprehensive work. Studying the ends and means of gay life from an economic perspective, she paints a more accurate picture than ever before of gay and lesbian standards of living, financial and family decisions, and professional lives, analyzing along the way the crucial issues that affect the livelihood of gay men and lesbians: workplace discrimination, denial of health care benefits to partners and children, the corporate wooing of gay consumer dollars, and the use of gay economic clout to inspire social and political change. *PATTY'S* has become one of Wiley's flagship publications in occupational health and safety, and the toxicology volumes give proof to the growth and development of the field of toxicology. What began as a single volume devoted to the field with the first edition (1948) of Patty's has now mushroomed into eight. This Fifth Edition will permit us to bring about many badly needed changes to the format and organization of the toxicology volumes. In addition to standardizing the format and sequence in which toxicologic data is presented for all of the compounds, the compounds will be organized according to logical groupings, e.g., the metals will be covered in 23 separate chapters making up Volumes II and III; Vol. IV will contain four chapters on aromatic hydrocarbons and 7 chapters on organic nitrogen compounds; Vol. V will contain eight chapters on organic halogenated hydrocarbons and four on aliphatic carboxylic acids; Vol. VI will feature three chapters on ketones, two on alcohols, and five on esters; and Vol. VII will include four chapters on epoxy compounds, two on glycol ethers, and eight on synthetic polymers. The reorganization of chapters in Volumes II through VI by itself will vastly facilitate information searching and retrieval. Volume VIII, like Volume I, does not cover compounds but rather other major issues in toxicology assessment or other forms of toxic agents.

Biological invasions by alien (non-native) species are widely recognized as a significant component of human-caused global environmental change and the second most important cause of biodiversity decline. Alien species threaten many European ecosystems and have serious environmental, economic and health impacts. The DAISIE (Delivering Alien Invasive Species Inventories for Europe) project has now brought together all available information on alien species in Europe (terrestrial, aquatic and marine) and from all taxa (fungi, plants, animals). Thus for the first time, an overview and assessment of biological invasions in the Pan-European region is finally possible. The Handbook of Alien Species in Europe summarises the major findings of this groundbreaking research and addresses the invasion trends, pathways, and both economic as well as ecological impact for eight major taxonomic groups. Approximately 11,000 alien species recorded in Europe are listed, and fact sheets for 100 of the most invasive alien species are included, each with a distribution map and colour illustration. The book is complemented by a regularly updated internet database providing free additional information. With its highly interdisciplinary approach, DAISIE and its Handbook will be the basis for future scientific investigations as well as management and control of alien invasive species in Europe.

Christy Constantakopoulou examines the history of the Aegean islands and changing concepts of insularity, with particular emphasis on the fifth century BC. Islands are a prominent feature of the Aegean landscape, and this inevitably created a variety of different (and sometimes contradictory) perceptions of insularity in classical Greek thought. Geographic analysis of insularity emphasizes the interplay between island isolation and island interaction, but the predominance of islands in the Aegean sea made island isolation almost impossible. Rather, island connectivity was an important feature of the history of the Aegean and was expressed on many levels. Constantakopoulou investigates island interaction in two prominent areas, religion and imperial politics, examining both the religious networks located on islands in the ancient Greek world and the impact of imperial politics on the Aegean islands during the fifth century. The world's ecosystems are increasingly threatened by human development. Ecological impact assessment (EcIA) is used to predict and evaluate the impacts of development on ecosystems and their components, thereby providing the information needed to ensure that ecological issues are given full and proper consideration in development planning. Environmental impact assessment (EIA) has emerged as a key to sustainable development by integrating social, economic and environmental issues in many countries. EcIA has a major part to play as a component of EIA but also has other potential applications in environmental planning and management. Ecological Impact Assessment provides a comprehensive review of the EcIA process and summarizes the ecological theories and tools that can be used to understand, explain and evaluate the ecological consequences of development proposals. It is intended for the many individuals and companies involved in EIA and EcIA, as well as other areas of environmental management where impacts on ecosystems need to be evaluated. It will benefit

planners, regulators, environmental consultants and scientists and will also provide an invaluable sourcebook and guide for the growing number of undergraduate students taking courses in applied ecology, EIA and related topics in environmental science. A practical management guide for the increasing numbers of practitioners of EcIA. A rapidly expanding subject driven by the proliferation of environmental legislation worldwide. Having recently authored one of the most significant books, *Money, Myths and Change*, in this exciting area of economics, Lee Badgett has now teamed up with Jeff Frank and a collection of international contributors to provide an analysis of sexual orientation discrimination on an international scale. Discrimination based on sexual orientation continues to fuel collective action, policy debates and academic scrutiny in many countries. For some time, sociologists and psychologists have studied sexual orientation discrimination in institutions and explored prejudices against lesbian, gay, bisexual, and transgender people in mainstream areas. Now economists have also begun to examine the experiences of lesbians, gay men and bisexuals in less traditional research sectors including the labour, housing, credit, and retail markets. This book includes sections on: wages and jobs discrimination across institutional contexts discrimination in cultural institutions including religion, education and sport addressing discrimination through public policies. Innovative and up-to-date this book is an essential read for postgraduate students studying in the areas of political economy, gender studies and feminist economics. "In spite of human prejudice to the contrary, there is but one religion and one truth, and all the great faiths of the world are parts or fragments of the Ancient Wisdom. The Scriptures of the world are the written records devised both to preserve and at the same time to conceal the secrets of the forty-nine branches of the Eternal Law. It naturally follows that there is a certain interdependence between religious writings. To understand any one sacred book completely it is necessary to also understand all other sacred books." Hall attempts to provide a context for the teachings of the Bible by comparing them to the teachings of many other spiritual traditions in human history. "The whole motion of the Universe is toward Truth. Truth is growing up in everything, manifesting through all forms and natures. Truth, therefore, may be called the hidden good, the secret God who dwells in the temples that are built for it according to the law." Manly P. This report addresses the research and development (R&D) organizations and the decision-making processes that the Federal Government needs to enable it to work toward national and global environmental objectives. It is essential that these programs be well organized, adequately funded, and closely linked with the policy-making process. The report suggests that there are many excellent scientists

and engineers in the federal research system, but they are operating within organizations and under a set of priorities that are directed more toward the problems of the past than the problems of today and tomorrow. The Commission asserts that the complex environmental problems of today require a restructuring of the federal environmental R&D system and the redirection of many of its programs to a new set of priorities. The report discusses over a dozen federal departments and agencies that conduct environment-related R&D and the need for a more dynamic, interrelated organizational structure and more effective assessment and policy-making processes. A variety of suggestions are presented for improving the R&D programs of individual departments and agencies, and among other measures, strengthening and streamlining R&D infrastructure, providing strong leadership, encouraging multidisciplinary research efforts, and improving coordination among research programs. A recommendation "To Improve Educational Programs in the Environmental Sciences" appears in the section on "Building a Strong Intellectual Base" (Chapter 7). The appendixes contain a review of federal environmental R&D programs and biographies of the task force members responsible for this report. (Contains 117 references.) (MCO) Biographic Memoirs Volume 85 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works. Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased. For historical and bibliographical purposes, these volumes are worth returning to time and again. This book is the first comprehensive global review of all aspects of alien plant invasions in protected areas. It provides insights into advances in invasion ecology emanating from work in protected areas, and the link to locally relevant management support for protected areas. The book provides in-depth case studies, illuminating interesting and insightful knowledge that can be shared across the global protected area network. The book includes the collective understanding of 80 ecologists and managers to extract as much information as possible that will support the long-term management of protected areas, and the biodiversity and associated ecosystem services they maintain. "This outstanding volume draws together pretty much all that can be said on this topic, ranging from the science, through policy, to practical action". Dr. Simon N. Stuart, IUCN Species Survival Commission, UK. "This important and timely volume addresses two of the most serious problems affecting biodiversity conservation today: assessing the extent to which protected areas are impacted by biological invasions and the complex problems of managing these impacts. Written by leading specialists, it provides a comprehensive overview of the issues and gives detailed examples drawn from protected areas across the world". Professor Vernon H. Heywood, School of Biological Sciences, University of Reading, UK
