North Carolina, U.S.A. Dr. Gary Green Prof C.James Holliman Department of Emergency Medicine Professor of Emergency Medicine John Hopkins University Pennsylvania State University Maryland, U.S.A. Hershey, PA, U.S.A. Presents a practical, pragmatic approach and holistic view of EMS and disaster management in a global context. Key Features: Covers all aspects of EMS including medical transportation, train accidents, ambulance services and telemedicine Model disaster plans for hospitals The foundation for EMS education was established in 1971 when the American Academy of Orthopaedic Surgeons (AAOS) authored the first emergency medical technician textbook. Since then, the AAOS has set the gold standard for EMS training programs with the Orange Book Series. This Second Edition, based on Intermediate Emergency Care and Transportation of the Sick and Injured, raises the bar even higher with world-class medical content and innovative instructional resources that meet the diverse needs of today's educators and students. Based on the new National EMS Education Standards for Advanced Emergency Medical Technician, the Second Edition offers complete coverage of every competency statement with clarity and precision in a concise format that ensures student comprehension and encourages critical thinking. New cognitive and didactic material is presented, along with new skills and features, to create an innovative AEMT training solution. Additional online skills allow this

textbook to be customized for every AEMT training program's unique needs. Current, State-of-the-Art Medical Content Advanced Emergency Care and Transportation of the Sick and Injured, Second Edition incorporates up-to-date, evidence-based medical concepts to ensure that students are taught assessment and treatment modalities that will help patients in the field today. Advanced Pathophysiology Advanced Emergency Care and Transportation of the Sick and Injured, Second Edition provides a solid foundation in pathophysiology--one of the key knowledge areas required to become a successful Advanced EMT. Patient Assessment This Second Edition teaches and reinforces the concept of Patient Assessment with a single, comprehensive chapter, ensuring that students understand patient assessment as a single, integrated process--the way that providers actually practice it in the field. Each medical and trauma chapter reinforces the patient assessment process by highlighting the unique aspects of the illness or injury. Clear Application to Real-World EMS Through evolving patient case studies in each chapter, the Second Edition offers students a genuine context for the application of the knowledge presented in the chapter. This approach makes it clear how all of the information will be used to help patients in the field. "Law and Ethics for Paramedics is the first book which really grapples with the application of law and ethics in the unique situations that paramedics and other prehospital professionals find themselves. The book is clear, concise and eminently readable, but most of all, useful to operational ambulance clinicians and their managers." Tim Kilner, Senior Lecturer in Paramedic Science, University of Worcester, UK Written by paramedics for paramedics, this resource provides you with all the key information you will need to know as you navigate your way through the, often tricky and, complicated area of law and ethics in paramedic

practice. Eleven contributing authors, each with their own perspectives and clinical backgrounds, explain the essential principles and apply these across the whole of the UK. Chapters cover a range of topics including: Information governance Mental capacity Clinical negligence Paramedic use of social media Assessment and treatment of children Medicines management. Each topic is broken down into practical chunks with many chapters supported by case studies to help relate the content to paramedic practice. Sixteen case studies, on topics from resuscitation to consent, and useful top tips will help you develop, reflect on and consider your own ethical practice. The law and how it relates to your practice can be complex, but with the help of this handy guide you will quickly gain confidence and insight into the legislation surrounding this vital aspect of paramedic practice. The Tactical Emergency Casualty Care Course Manual is the printed component for the NAEMTs 16-hour continuing education Tactical Emergency Casualty Care (TECC) Course. It may be used by both instructors and students as a resource to prepare for the TECC course and as a reference that discusses the current best practices for EMS providers to utilize in the response to and care of patients in a civilian tactical environment. The TECC Course does not offer certification as a tactical medic it is intended to teach all EMS providers the best patient care and safety practices in a civilian tactical environment, such as an active shooting hostile event. Composed of 10 lessons, The TECC Course Manual will: Cover the phases of care in a civilian tactical environment, Describe step-by-step the life-saving skills that may be performed in a civilian tactical environment, Provide safety and survival strategies for EMS providers and their patients In addition to the TECC Course Manual, instructors may also purchase the TECC Online Instructors Toolkit (9781284483888). This resource features 10 lesson

presentations in PPT, as well as interactive patient simulations and skill stations that allow students to gain experience in a safe environment monitored by experienced EMS providers. Care for patients who have suffered major trauma, for example following a road accident or a fall, has not significantly improved in the last 20 years despite numerous reports identifying poor practice, and services are not being delivered efficiently or effectively. Survival rates vary significantly, with a range from five unexpected survivors to eight unexpected deaths per 100 trauma patients, reflecting the variable quality of care. 450 to 600 lives could be saved each year in England if major trauma care was managed more effectively. For best outcomes care should be led by consultants experienced in major trauma; but major trauma is most likely to occur at night and at weekends, when consultants are not normally in the emergency department. Major trauma care is not coordinated and there are no formal arrangements for taking patients directly for specialist treatment or transferring them between hospitals. A significant number of patients that need a scan CT do not receive one. Not enough patients who need a critical care bed are given one. Access to rehabilitation services varies and patients are not always receiving the care that they need. The estimated annual lost economic output from deaths and serious injuries from major trauma is between £3.3 billion and £3.7 billion. Only 60 per cent of hospitals delivering major trauma care contribute to the Trauma Audit and Research Network (TARN). The performance of the 40 per cent of hospitals that do not submit data to TARN cannot be measured. Based on the new National EMS Education Standards for Advanced Emergency Medical Technician, the Second Edition offers complete coverage of every competency statement with clarity and precision in a concise format that ensures student comprehension and encourages critical thinking. New

cognitive and didactic material is presented, along with new skills and features, to create an innovative AEMT training solution. Topics including advanced pathophysiology, acid-base balance, fluids and electrolytes, intravenous therapy, intraosseous access, blood glucose monitoring, and administration of AEMT-level medications tailor this textbook to the new Advanced EMT level. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. The author held a unique position in the history of UK ambulance service development, commencing his career as an ambulance in 1962, rising to the top position of Chief Officer in eight years, becoming a central figure in the significant professional development of the service for another twenty-nine years, making him the UK's longest serving Chief Officer of any of the main emergency services. He has a very personal insight into all the policy decisions affecting the service over that period and of the many trials and tribulations behind many of the decisions leading to the modern paramedical ambulance service reflected in today's modern ambulance service. A people person, the author shares his experiences right from early childhood, which he believes influenced his management style and subsequent successes in introducing new and often radical change, whilst taking his workforce with him, often against strong national and local political opposition. The book clearly defines the progress of ambulance services since the inception of the National Health Service in 1948 up until his retirement in 1999. It illustrates both the technical and procedural techniques used to modernise what is and always will be a publicly sensitive and essential emergency service. As such, it provides a much needed professional historical record of the ambulance service in the last half of the twentieth century, from someone who lived the experience first hand. The author

draws on his particular management style and experiences, relating them back to his formative childhood years and shares some hitherto unknown behind the scenes facts with the reader. The book succeeds in informing the health care professional about the ambulance service and its modern day role in the community and yet also provides a valuable insight for students studying for a University Management Degree, whether in Health Service management or general management. It is fascinating reading, not least because the ambulance service touches all our lives at some time or other, but also because the authors natural writing style is obviously borne out of having lived all the experiences, first hand and at a very senior level. A unique opportunity to learn about an essential life saving service and the management techniques involved in operating at CEO level in a politically charged and often controversial public environment. "Based on the National EMS Education Standards and the 2015 CPR/ECC Guidelines, the Eleventh Edition offers complete coverage of every competency statement with clarity and precision in a concise format that ensure students' comprehension and encourages critical thinking. New cognitive and didactic material is presented, along with new skills and features, to create a robust and innovative EMT training solution."--Back cover. Delve into this book today!..... : The high number of EMRs across Canada cannot be ignored as contributing a critical role in the chain of survival, although it is a level of practice that is least comprehensive (clinically speaking), and is also generally not consistent with any medical acts beyond advanced first-aid, with the exception of automated external

defibrillation (which is still considered a regulated medical act in most provinces in Canada). ...For example, the province of Alberta uses the title Emergency Medical Technician, or 'EMT' for the Primary Care Paramedic and 'Paramedic' only for those qualified as Advanced Care Paramedics Advanced Life Support (ALS) providers - but almost all provinces are gradually moving to adopting the new titles, or have at least recognized the NOCP document as a benchmarking document to permit inter-provincial labour mobility of practitioners, regardless of how titles are specifically regulated within their own provincial systems. ...For example, to maintain NREMT certification, EMT-Bs must obtain at least 48 hours of additional education and either complete a 24 hour refresher course or complete an additional 24 hours of CEs that would cover, on an hour by hour basis, the same topics as the refresher course would. ...Similar in a sense to medical school clinical rotations, EMT students are required to spend a required amount of time in an ambulance and on a variety of hospital services (e. g. obstetrics, emergency medicine, surgery, psychiatry) in order to complete a course and become eligible for the certification exam. There is absolutely nothing that isn't thoroughly covered in the book. AR 40-3 04/23/2013 MEDICAL, DENTAL, AND VETERINARY CARE , Survival Ebooks In the past few years nursing - its structure, training procedure and qualifications - has undergone significant changes as a profession. Services, language: English, abstract: Dispatcher training can improve ambulance response times in emergency medical service (EMS) systems in low income countries. Emergency health care systems are of increasing concern in international healthcare developments and the global fight against the burdens of disease. Studies show that emergency health care improvements in developing countries should focus on ambulance response. Low-cost changes including emergency medical dispatch training in developing urban emergency health care systems can improve ambulance response times. Concerns about focusing on ambulance response time as a single indicator are addressed by showing a case sensitive approach for developing emergency health care systems that in return can identify ambulance response as main indicator for a particular system. This approach has been chosen for the subject of study, the Osh Ambulance Service, a municipal EMS in Kyrgyzstan. This particular service, the implemented research, the study design and, the data analysis are presented. The data show that there has been a change from an average response time of 23, 18 minutes to 20, 15 minutes. This data is statistically significant and indicates that the implemented changes, despite severe challenges, likely have an effect, but it is unclear if this change will have a large clinical impact. Further research on emergency medical dispatch and emergency medical response in low- and middle- income countries is encouraged. With increased opportunities and further globalization emergency health care professionals could play a greater role in research and development of emergency medical service systems in resource-limited countries. This volume provides fresh insights and management understanding of the changing role of the ambulance services against the backdrop of massive cuts in health budgets around the world and the changing context of pre-hospital care within the wider healthcare networks. The challenges of funding, training and cultural transformation are now felt globally. The need to learn and adapt from suitable models of ambulance service delivery have never been greater. The book offers critical insights into the theory and practice of strategic and operational management of ambulance services and the leadership needs for the service. One of the highlight of this volume is to bring together scholarship using experts- academics, practitioners and professionals in the field, to each of the chosen topics. The chapters are based in the practical experiences of the authors and are written in a way that is accessible and suitable for a range of audiences. We are confident that this book will cater to a wider audience to inform policy and practice, both in the UK and internationally. Paresh Wankhade is Professor of Leadership and Management at Edge Hill University, UK Kevin Mackway-Jones is the Medical Director at North West Ambulance Service NHS Trust, UK Endorsements "This unique and valuable publication, charts the history and development of the ambulance service in England over the last hundred years or so. The role of this key emergency service has always been important, and arguably never more so than today. The contributing authors have not

only provided the reader with great insights into where the service has come from and the leadership challenges it has, and continues to face; it also gives examples of how the future could look as our journey of transformation continues." Peter Bradley CBE, MBA (and author of Taking Healthcare to the Patient 2005), Chief Executive Officer. St John National Headquarters, New Zealand "With a year on year increase in demand for emergency ambulances and over 9 million calls annually, the UK Ambulance Service must change from its emergency care and transport focus model. With the increase in professionalism of paramedics and an uplift in assessment and clinical skills the modern paramedic is increasingly able to treat at home, direct patients with alternative care pathways and avoid transportation to overburdened Emergency Departments. Whilst there is some historical and cultural resistance to change there is a need for further development in clinical skills and a new perspective for the future Ambulance Service. This book brings together practitioners, managers, academics and provides a broad understanding of the major management issues in the UK Ambulance Service. It includes the history of the Ambulance Service, quality and risk management issues, commissioning, leadership, intra-operability and shape of the future ambulance service. The content will be of interest to students, practitioners and academics". Sir Keith Porter, Professor of Clinical Traumatology, University Hospitals Birmingham NHS Foundation Trust, United Kingdom With a medley of experiences from the earliest days as a student paramedic, qualified officer, humanitarian health assistant, and high altitude medical officer, this book has underpinned the story of an everyday paramedic. Whilst thousands of ambulance officers, emergency medical technicians and paramedics criss-cross their way through communities around the world to provide support to people, 'Here Hold My Drink and Watch

This' has captured a rare insight into the real people of paramedicine. Written from a down-to-earth perspective, Sunny brings to life the challenging and confronting work paramedics are faced with on a daily basis yet also finds some humour and consolation amongst the confusion and chaos. A true account of going through UCLA's famed Daniel Freeman Paramedic Program—and practicing emergency medicine on the streets of Los Angeles. Nine months of tying tourniquets and pushing new medications, of IVs, chest compressions, and defibrillator shocks—that was Kevin Grange's initiation into emergency medicine when, at age thirty-six, he enrolled in the “Harvard of paramedic schools”: UCLA's Daniel Freeman Paramedic Program, long considered one of the best and most intense paramedic training programs in the world. Few jobs can match the stress, trauma, and drama that a paramedic calls a typical day at the office, and few educational settings can match the pressure and competitiveness of paramedic school. Blending months of classroom instruction with ER rotations and a grueling field internship with the Los Angeles Fire Department, UCLA's paramedic program is like a mix of boot camp and med school. It would turn out to be the hardest thing Grange had ever done—but also the most transformational and inspiring. An in-depth look at the trials and tragedies that paramedic students experience daily, *Lights and Sirens* is ultimately about the best part of humanity—people working together to help save a human life. The two-volume "Manual of Nursing" is a comprehensive and up-to-date work on the nursing profession in South Africa. It covers the whole nursing curriculum and broadens the student's scope of knowledge by discussing subjects not included in midwifery, critical care nursing, community nursing and psychiatric nursing. Easy referencing ensures that the set (encapsulating the integrated nursing course) is of immediate and practical use. This work discusses medical and surgical conditions from a nursing perspective. Volume One introduces certain basics of nursing theory and practice and it includes a section dealing with nursing-related services.
