Applied Linear Statistical Models 5e is the long established leading authoritative text and reference on statistical modeling. For students in most any discipline where statistical analysis or interpretation is used, ALSM serves as the standard work. The text includes brief introductory and review material, and then proceeds through regression and modeling for the first half, and through ANOVA and Experimental Design in the second half. All topics are presented in a precise and clear style supported with solved examples, numbered formulae, graphic illustrations, and "Notes" to provide depth and statistical accuracy and precision. Applications used within the text and the hallmark problems, exercises, and projects are drawn from virtually all disciplines and fields providing motivation for students in virtually any college. Since the publication of the first edition in 1982, the goal of Simulation Modeling and Analysis has always been to provide a comprehensive, state-of-the-art, and technically correct treatment of all important aspects of a simulation study. The book strives to make this material understandable by the use of intuition and numerous figures, examples, and problems. It is equally well suited for use in university courses, simulation practice, and self study. The book is widely regarded as the "bible" of simulation and now has more than 100,000 copies in print. The book can serve as the primary text

for a variety of courses; for example: *A first course in simulation at the junior, senior, or beginning-graduate-student level in engineering, manufacturing, business, or computer science (Chaps. 1 through 4, and parts of Chaps. 5 through 9). At the end of such a course, the students will be prepared to carry out complete and effective simulation studies, and to take advanced simulation courses. *A second course in simulation for graduate students in any of the above disciplines (most of Chaps. 5 through 12). After completing this course, the student should be familiar with the more advanced methodological issues involved in a simulation study, and should be prepared to understand and conduct simulation research. *An introduction to simulation as part of a general course in operations research or management science (part of Chaps. 1, 3, 5, 6, and 9). Designed for the three-semester engineering calculus course, **CALCULUS: EARLY TRANSCENDENTAL FUNCTIONS**, Sixth Edition, continues to offer instructors and students innovative teaching and learning resources. The Larson team always has two main objectives for text revisions: to develop precise, readable materials for students that clearly define and demonstrate concepts and rules of calculus; and to design comprehensive teaching resources for instructors that employ proven pedagogical techniques and save time. The Larson/Edwards Calculus program offers a solution to address the needs of any calculus course and any level of calculus student. Every edition from the first to the sixth of **CALCULUS: EARLY TRANSCENDENTAL FUNCTIONS** has made the mastery of traditional calculus skills a priority, while embracing the best features of new technology and, when appropriate, calculus reform ideas. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Calculus for Business, Economics, and the Social and Life Sciences introduces calculus in real-world contexts and provides a sound, intuitive understanding of the basic concepts students need as they pursue careers in business, the life sciences, and the social sciences. The new Ninth Edition builds on the straightforward writing style, practical applications from a variety of disciplines, clear step-by-step problem solving techniques, and comprehensive exercise sets that have been hallmarks of Hoffmann/Bradley's success through the years. The first edition of this book was the first text to be written on the Arena software, which is a very popular simulation modeling software. What makes this text the authoritative source on Arena is that it was written by the creators of Arena themselves. The new third edition follows in the tradition of the successful first and second editions in its tutorial style (via a sequence of carefully crafted examples) and an accessible writing style. The updates include thorough coverage of the new version of the Arena software (Arena 7.01), enhanced support for Excel and Access, and updated examples to reflect the new version of software. The CD-ROM that accompanies the book contains the Academic version of the Arena software. The software features new capabilities such as model documentation, enhanced plots, file reading and writing, printing and animation symbols. "Fully updated for the thirteenth edition, the award-winning Art of Public Speaking offers a time-tested approach that has made it the most widely used college textbook on its subject in the world. Providing clear, authoritative coverage and written in a voice that speaks personally to students, it helps them become capable, responsible speakers, listeners, and thinkers. Seamlessly coordinated with Connect, McGraw-Hill Education's pathbreaking online

program, it supplies a proven set of teaching and learning tools that is without parallel among public speaking books"-- This resource has been the creative professional's bible for more than 30 years. Including hundreds of sales leads, it also tells artists and designers exactly how to put these listings to work. There's also a wealth of tips and advice on everything from paying taxes and shipping artwork to copyright basics and self-promotion. Art across Time combines sound scholarship and lively prose, engaging students with both its narrative and its lavish visual program. Popular with majors and non-majors alike, Art across Time offers readers more than a chronology of art; it discusses political, economic, social, and personal concerns that influence the artists and inform their work, uniquely conveying the ideas, beliefs, and circumstances that inspire creativity. Visual reproductions in the text are larger in scale and higher in quality than those in other art history texts, enhancing visual appeal and allowing students to view details and elements of composition with greater ease. The new third edition is enhanced by new visual connections between works, more use of color and architectural diagrams, an enhanced map program, new boxed readings, and more. In addition, the text's illustration program is now available to adopting instructors in digital format via The Image Vault--McGraw-Hill's new Web-based presentation manager. Instructors can incorporate images from The Image Vault in digital presentations that can be used in class offline, burned to CD-ROM, or embedded in course Web pages. See www.mhhe.com/theimagevault for more details!

Leadership: The Art of Experience, Fifth Edition, is written for the general student to serve as a stand-alone introduction to the subject of leadership. The text consists of 13 chapters and a final section on Basic and Advanced Leadership Skills. Authors Hughes, Ginnett, and Curphy have drawn upon three different types of literature: empirical studies; interesting anecdotes, stories and findings; and leadership skills to create a text that is personally relevant, interesting and scholarly. The authors' unique quest for a careful balancing act of leadership materials help students apply theory and research to their real-life experiences. Analyze, Understand, Appreciate Living with Art provides the tools to help students think critically about the visual arts. Using a wealth of examples, the first half of the text examines the nature, vocabulary, and elements of art, offering a foundation for students to learn to analyze art effectively. The latter half sets out a brief but comprehensive history of art, leading students to understand art within the context of its time and place of origin. High quality images from a wide range of periods and cultures bring the art to life, and topical essays throughout the text foster critical thinking skills. Taken together, all of these elements help students to better appreciate art as a reflection of the human experience and to realize that living with art is living with ourselves. "Film Art provides the respected scholarship and analytic tools students need to understand key vocabulary and concepts of film forms, techniques, and history; appreciate a wide variety of classic and contemporary films and the creative choices made by filmmakers to shape the experience of viewers; and analyze films critically and systematically to enrich their understanding and appreciation of any film, in any genre"-- The Graphics Drawing Workbook is meant to be used with either Technical Graphics Communications 2nd Edition or Fundamentals of Graphics Communications 2nd Edition. However the workbook can be used with any good reference text including Graphics communication for engineers by this author. There are workbook

problems for every major topic normally taught in an engineering or technical drawing course. Most of the problems can be drawn with instruments or sketched. A special emphasis has been put on freehand sketching in this workbook in response to the increased use of CAD in many technical drawing courses. It is expected that the instructor will supplement these problems with others from the text to fully reinforce technical drawing topics. How to Design and Evaluate Research in Education provides a comprehensive introduction to educational research. Step-by-step analysis of real research studies provides students with practical examples of how to prepare their work and read that of others. End-of-chapter problem sheets, comprehensive coverage of data analysis, and information on how to prepare research proposals and reports make it appropriate both for courses that focus on doing research and for those that stress how to read and understand research. Steven Chapra's second edition, Applied Numerical Methods with MATLAB for Engineers and Scientists, is written for engineers and scientists who want to learn numerical problem solving. This text focuses on problem-solving (applications) rather than theory, using MATLAB, and is intended for Numerical Methods users; hence theory is included only to inform key concepts. The second edition features new material such as Numerical Differentiation and ODE's: Boundary-Value Problems. For those who require a more theoretical approach, see Chapra's best-selling Numerical Methods for Engineers, 5/e (2006), also by McGraw-Hill. EBOOK: Operations Management: Theory and Practice: Global Edition This volume is a basic art text for college students and other interested readers. It offers a broad introduction to the nature, vocabulary, media, and history of art, showing examples from many cultures. Provides an introduction to the theory of computation that emphasizes formal languages, automata and abstract models of computation, and computability. This book also includes an introduction to computational complexity and NP-completeness. Business and Society: Stakeholder Relations, Ethics and Public Policy by Lawrence/Weber/Post, has continued through several successive author teams to be the market-leader in its field. For over thirty years, Business and Society has been updated and reinvented in response to society's relationship to business. Business and Society, 11e highlights why government regulation is sometimes required as well as new models of business-community collaboration. Business and Society, 11e is a book with a point of view. Lawrence, Weber and Post believe that businesses have social (as well as economic) responsibilities to society; that business and government both have important roles to play in the modern economy; and that ethics and integrity are essential to personal fulfillment and to business success. The book is designed to be easily modularized; an instructor who wishes to focus on a particular portion of the material may select individual chapters or cases to be packaged in a Primis custom product.
