Background of the study; Circulation and in-house use of books; Use of journals; The economics of materials' use; A cost benefit model of library operations; Alternatives to local questions; The path ahead. David Bartholomae has been a prominent figure in the field of composition and rhetoric for almost five decades. This is an end-of-career book, a collection of late essays that reflect on the teaching of reading and writing, on the challenges and value of students' work, and on the place of English in the university curriculum. The chapters are unified by a thread that connects some of the books and ideas, people and places, students and courses that shaped and sustained his work as a scholar and teacher over time. Several chapters present and discuss extended examples of student writing. The essays trace his formation from the early days of "Basic Writing" to his final engagements with study abroad and travel writing, where he had the chance to think again, and in radically different settings, about the fundamental problems of communication across linguistic and cultural divides. Presents the University of Pittsburgh, of Pittsburgh, Pennsylvania, which has secondary campuses in Bradford, Greensburg, Johnstown, and Titusville. Details undergraduate and graduate degree programs offered at the school. Includes a calendar of academic, sporting, and social events. Provides access to publications produced by the University, individual departments, and students. Details the admission processes for undergraduate and graduate students. Highlights activities of campus libraries, research centers, and the Office of Research. Contains a keyword-searchable campus e-mail and phone directory. In the middle of the eighteenth century, English literature, composition, and rhetoric were introduced almost simultaneously into colleges throughout the British cultural provinces. Professorships of rhetoric and belles lettres were established just as print was reaching a growing reading public and efforts were being made to standardize educated taste and usage. The provinces saw English studies as a means to upward social mobility through cultural assimilation. In the educational centers of England, however, the introduction of English represented a literacy crisis brought on by provincial institutions that had failed to maintain classical texts and learned languages. Today, as rhetoric and composition have become reestablished in the humanities in American colleges, English studies are being broadly transformed by cultural studies, community literacies, and political controversies. Once again, English departments that are primarily departments of literature see these basic writing courses as a sign of a literacy crisis that is undermining the classics of literature. The Formation of College English reexamines the civic concerns of rhetoric and the politics that have shaped and continue to shape college English. The first work in English to discuss the social and political history of lawyers in a Latin American country, Honorable Lives presents a portrait of lawyers in late colonial and early modern Colombia. Uribe-Uran focuses on the social origins, education, and careers of those qualified to practice law before the highest colonial courts—Audiencias—and the republican courts after the 1820s. In the course of his study, Uribe-Uran answers many questions about this elite group of professionals. What were the social origins and families of lawyers? Their relation to the state? Their participation in political movements and parties, revolutions, civil wars, and other political processes? Their ideas, education, and training? By exploring the lives of lawyers, Uribe-Uran is also able to present a general history of Latin America while examining the key social and political changes and continuities from 1780 to 1850—particularly the elites and state managers. Honorable Lives features three genealogical charts detailing bureaucratic networks established by families of lawyers in different historical periods. The text also contains an abundant series of statistical tables and charts, and concise biographical information on approximately 150 Latin American lawyers. This book will appeal to Latin Americanists, students of law, and anyone interested in the lives and histories of lawyers. This inspirational book is about engaged pedagogies, an approach to teaching and learning that centers dialogue, listening, equity, and connection among stakeholders who understand the human and ecological cost of inequality. The authors share their story of working with students, teachers, teacher educators, families, community members, and union leaders to create transformative practices within and beyond public school classrooms. This collaborative work occurred within various spaces—inside school buildings, libraries, churches, community gardens, nonprofit organizations, etc.—and afforded opportunities to grapple with engaged pedagogies in times of political crisis. Featuring descriptions from a district-wide initiative, this book offers practical and theoretical resources for educators wanting to center justice in their work with students. Through question-posing, color images, empirical observations, and use of scholarly and practitioner-driven literature, readers will learn how to use these resources to reconfigure schools and classrooms as sites of engagement for equity, justice, and love. Book Features: Provides a sound approach to deeply taking up the work of justice and engaged pedagogies. Presents linguistic, cultural, theoretical, and practical ideas that can be used and implemented immediately. Includes reflective questions, found poetry, lesson ideas, storytelling as narrative, and examples of engaged pedagogies. Shares stories from a district-wide initiative that embedded engaged pedagogies within classrooms, counseling offices, and libraries. Showcases original artwork and images in full color by Grace D. Player, one of the coauthors. Robinson Jeffers' name has been so inseparably linked with California that it is difficult to think of his origins being elsewhere. Jeffers was both in 1887 in Pittsburgh, Pennsylvania. His father was a professor at Western Theological Seminary and a scholar of ancient languages who taught his son to read Greek before he started school. In 1902, Jeffers enrolled in the University of Western Pennsylvania, now the University of Pittsburgh, but his family moved to California soon thereafter, and he graduated from Occidental College at the age of eighteen. Inhumanism was

the label Jeffers first used in the preface to *The Double Axe and Other Poems* to explain the doctrine that permeates all of his poetry. Defining humanism as “a system of thinking in which man, his interests, and development, are made dominant, his addition of the negative prefix was his attempt to subdue human interests and development to something greater, contrasting them against the magnificent beauty and immense worth of the natural world. In addition to discussing Jeffers’ life and philosophy, Monjian analyzes the form and style of his poetry, calling it “a singular style, slashing its way across the page with violence of image and a free, crashing rhythm.” She ends the book: “Whatever the future holds for this poet, our own age is still awed by the magnificent talent and effort of a burdened mind struggling to free humanity from the shackles of an impoverished self-love, and the myths to which he believes it gave birth.”

The mechanical philosophy first emerged as a leading player on the intellectual scene in the early modern period—seeking to explain all natural phenomena through the physics of matter and motion—and the term mechanism was coined. Over time, natural phenomena came to be understood through machine analogies and explanations and the very word mechanism, a suggestive and ambiguous expression, took on a host of different meanings. Emphasizing the important role of key ancient and early modern protagonists, from Galen to Robert Boyle, this book offers a historical investigation of the term mechanism from the late Renaissance to the end of the seventeenth century, at a time when it was used rather frequently in complex debates about the nature of the notion of the soul. In this rich and detailed study, Domenico Bertoloni Meli focuses on strategies for discussing the notion of mechanism in historically sensitive ways; the relation between mechanism, visual representation, and anatomy; the usage and meaning of the term in early modern times; and Marcello Malpighi and the problems of fecundation and generation, among the most challenging topics to investigate from a mechanistic standpoint. Excerpt: The University of Pittsburgh, commonly referred to as Pitt, is a state-related research university located in Pittsburgh, Pennsylvania, United States. Founded as Pittsburgh Academy in 1787 on what was then the American frontier, Pitt is one of the oldest continuously chartered institutions of higher education in the United States. Pitt evolved into the Western University of Pennsylvania with an alteration to its charter in 1819, and upon relocating to its current campus in the Oakland neighborhood of Pittsburgh in 1908, the school received its current moniker, the University of Pittsburgh. For most of its history Pitt was a private institution, until it became part of the Commonwealth System of Higher Education in 1966. Pitt has consistently placed in the top cluster of U.S. public research universities and among the overall top 25 research universities according to the Center for Measuring University Performance, is listed as one of U.S. News & World Report's top 20 public universities, and has been listed among the best colleges for the quality of life of its students. Pitt has also been named as a "best value" by various publications, and has appeared in multiple rankings of the world's top universities. Pitt is among the nation's and world's most active research institutions as... Every city has an environmental story, perhaps none so dramatic as Pittsburgh's. Founded in a river valley blessed with enormous resources—three strong waterways, abundant forests, rich seams of coal—the city experienced a century of exploitation and industrialization that degraded and obscured the natural environment to a horrific degree. Pittsburgh came to be known as “the Smoky City,” or, as James Parton famously declared in 1866, “hell with the lid taken off.” Then came the storied Renaissance in the years following World War II, when the city's public and private elites, abetted by technological advances, came together to improve the air and renew the built environment. Equally dramatic was the sweeping deindustrialization of Pittsburgh in the 1980s, when the collapse of the steel industry brought down the smokestacks, leaving vast tracks of brownfields and riverfront. Today Pittsburgh faces unprecedented opportunities to reverse the environmental degradation of its history. In *Devastation and Renewal*, scholars of the urban environment post questions that both complicate and enrich this story. Working from deep archival research, they ask not only what happened to Pittsburgh's environment, but why. What forces—economic, political, and cultural—were at work? In exploring the disturbing history of pollution in Pittsburgh, they consider not only the sooty skies, but also the poisoned rivers and creeks, the mined hills, and scarred land. Who profited and who paid for such “progress”? How did the environment Pittsburghers live in come to be, and how it can be managed for the future? In a provocative concluding essay, Samuel P. Hays explores Pittsburgh's “environmental culture,” the attitudes and institutions that interpret a city's story and work to create change. Comparing Pittsburgh to other cities and regions, he exposes exaggerations of Pittsburgh's environmental achievement and challenges the community to make real progress for the future. A landmark contribution to the emerging field of urban environmental history, *Devastation and Renewal* will be important to all students of cities, of cultures, and of the natural world. Incorporating the voices of faculty, staff, and students, *Becoming Hispanic-Serving Institutions* asserts that HSIs are undervalued, yet reveals that they serve an important role in the larger landscape of postsecondary institutions. Travelers from Europe, North, and South America often perceive Mexico as a mythical place onto which they project their own cultures' desires, fears, and anxieties. Gómez argues that Mexico's role in these narratives was not passive and that the environment, peoples, ruins, political revolutions, and economy of Mexico were fundamental to the configuration of modern Western art and science. This project studies the images of Mexico and the ways they were contested by travelers of different national origins and trained in varied disciplines from the nineteenth to the twenty-first century. It starts with Alexander von Humboldt, the German naturalist whose fame sprang from his trip to Mexico and Latin America, and ends with Roberto Bolaño, the Chilean novelist whose work defines Mexico as an “oasis of horror.” In between, there are archaeologists, photographers, war correspondents, educators, writers, and artists for whom the trip to Mexico represented a rite of passage, a turning point in their intellectual biographies, their scientific disciplines, and their artistic practices. This volume, written in recognition of the University's 150th birthday, explores the history of Pitt from 1787 to 1937. It includes information on the Pittsburgh Academy and the Western University of Pennsylvania and is an excellent source of information about the University's early roots. In addition, it gives an overview of the structure of the University and its colleges as they existed in 1937. Roy Lubove's *Twentieth-Century Pittsburgh* is a pioneering analysis of elite driven, post-World War II urban renewal in a city once disdained as “hell with the lid off.” The book continues to be invaluable to anyone interested in the fate of America's beleaguered metropolitan and industrial centers. Science is usually known by its most successful figures and resource-rich institutions. In stark contrast, *Creativity from the Periphery* draws our attention to unknown figures in science—those who remain marginalized, even neglected, within its practices. Researchers in early twentieth-century colonial India, for example, have made significant contributions to the stock of scientific knowledge and have provided science with new breakthroughs and novel ideas, but to little acclaim. As Deepanwita Dasgupta argues, sometimes the best ideas in science are born from difficult and resource-poor conditions. In this study, she turns our attention to these peripheral actors, shedding new light on how scientific creativity operates in lesser-known, marginalized contexts, and how the work of self-trained researchers, though largely ignored, has contributed to important conceptual shifts. Her book presents a new philosophical framework for understanding this peripheral creativity in science through the lens of trading zones—where knowledge is exchanged between two unequal

communities—and explores the implications for the future diversity of transnational science. *Bound Lives* chronicles the lived experience of race relations in northern coastal Peru during the colonial era. Rachel Sarah O’Toole examines the construction of a *casta* (caste) system under the Spanish government, and how this system was negotiated and employed by Andeans and Africans. Royal and viceregal authorities defined legal identities of “Indian” and “Black” to separate the two groups and commit each to specific trades and labor. Although they were legally divided, Andeans and Africans freely interacted and depended on each other in their daily lives. Thus, the caste system was defined at both the top and bottom of society. Within each caste, there were myriad subcategories that also determined one’s standing. The imperial legal system also strictly delineated civil rights. Andeans were afforded greater protections as a “threatened” native population. Despite this, with the crown’s approval during the rise of the sugar trade, Andeans were driven from their communal property and conscripted into a forced labor program. They soon rebelled, migrating away from the plantations to the highlands. Andeans worked as artisans, muleteers, and laborers for hire, and used their legal status as Indians to gain political representation. As slaves, Africans were subject to the judgments of local authorities, which nearly always sided with the slaveholder. Africans soon articulated a rhetoric of valuation, to protect themselves in disputes with their captors and in slave trading negotiations. To combat the ongoing diaspora from Africa, slaves developed strong kinship ties and offered communal support to the newly arrived. *Bound Lives* offers an entirely new perspective on racial identities in colonial Peru. It highlights the tenuous interactions of an imperial power, indigenous group, and enslaved population, and shows how each moved to establish its own power base and modify the existing system to its advantage, while also shaping the nature of colonialism itself.

Other Worlds is true to its title, from a look at our everyday joys and griefs as interpreted by the Mars of classic science fiction and the crazy domain of quantum physics; to studies of the many conflicting realities that America uneasily accommodates in a time of pandemic and protests; to elegiac poems informed by the realms of memory, ghosts, and imagined afterlives. From a poem of one line to a sequence of twelve sections, from comic hijinks to despair, and from private revelation to public declaiming, this is a bravura performance by the only poet to have twice received the National Book Critics Circle Award and who, at age seventy-three, is writing at the height of his powers.

The essential pocket primer on climate change that will leave an indelible impact on everyone who reads it. “Hope Jahren asks the central question of our time: how can we learn to live on a finite planet?” (Elizabeth Kolbert, author of *The Sixth Extinction*). “Hope Jahren is the voice that science has been waiting for.” —Nature Hope Jahren is an award-winning scientist, a brilliant writer, a passionate teacher, and one of the seven billion people with whom we share this earth. In *The Story of More*, she illuminates the link between human habits and our imperiled planet. In concise, highly readable chapters, she takes us through the science behind the key inventions—from electric power to large-scale farming to automobiles—that, even as they help us, release greenhouse gases into the atmosphere like never before. She explains the current and projected consequences of global warming—from superstorms to rising sea levels—and the actions that we all can take to fight back. At once an explainer on the mechanisms of global change and a lively, personal narrative given to us in Jahren’s inimitable voice, *The Story of More* is “a superb account of the deadly struggle between humanity and what may prove the only life-bearing planet within ten light years” (E. O. Wilson). Pittsburgh has a rich history of social consciousness in calls for justice and equity. Today, the movement for more sustainable practices is rising in Pittsburgh. Against a backdrop of Marcellus shale gas development, initiatives emerge for a sustainable and resilient response to the climate change and pollution challenges of the twenty-first century. People, institutions, communities and corporations in Pittsburgh are leading the way to a more sustainable future. Examining the experience of a single city, with all of its social and political complexities and long industrial history, allows a deeper understanding of the challenges and opportunities inherent in adapting to a changing world. Choices for more sustainable pathways for the future include transforming the energy system, restoring infertile ground, and preventing pollution through green chemistry production. Throughout the book, case studies responding to ethical challenges give specific examples of successful ways forward. Inspired by Rachel Carson’s voice of precaution in protecting the Earth, this is a book about empowerment and hope.

Radiation Evangelists explores X-ray and radium therapy in the United States and Great Britain during a crucial period of its development, from 1896 to 1925. It focuses on the pioneering work of early advocates in the field, the “radiation evangelists” who, motivated by their faith in a new technology, trust in new energy sources, and hope for future breakthroughs, turned a blind eye to the dangers of radiation exposure. Although ionizing radiation effectively treated diseases like skin infections and cancers, radiation therapists—who did not need a medical education to develop or administer procedures or sell tonics containing radium—operated in a space of uncertainty about exactly how radiation worked or would affect human bodies. And yet radium, once a specialized medical treatment, would eventually become a consumer health product associated with the antibacterial properties of sunlight. This book raises important questions about medical experimentation and the so-called Golden Rule of medical ethics, issues of safety and professional identity, and the temptation of a powerful therapeutic tool that also posed significant risks in its formative years. In this cautionary tale of technological medical progress, Jeffrey Womack reveals how practitioners and their patients accepted uncertainty as a condition of their therapy in an attempt to alleviate human suffering. A trenchant and wide-ranging look at this alarming national trend, *Disrupting the School-to-Prison Pipeline* is unsparing in its account of the problem while pointing in the direction of meaningful and much-needed reforms. The “school-to-prison pipeline” has received much attention in the education world over the past few years. A fast-growing and disturbing development, it describes a range of circumstances whereby “children are funneled out of public schools and into the juvenile and criminal justice systems.” Scholars, educators, parents, students, and organizers across the country have pointed to this shocking trend, insisting that it be identified and understood—and that it be addressed as an urgent matter by the larger community. This new volume from the Harvard Educational Review features essays from scholars, educators, students, and community activists who are working to disrupt, reverse, and redirect the pipeline. Alongside these authors are contributions from the people most affected: youth and adults who have been incarcerated, or whose lives have been shaped by the school-to-prison pipeline. Through stories, essays, and poems, these individuals add to the book’s comprehensive portrait of how our education and justice systems function—and how they fail to serve the interests of many young people.

The Thicket opens into intimate encounters with the more-than-human world—rivers, birds, stones—and with a “you” that is not a person, necessarily, but also not not a person: maybe God, maybe an aspect of the self, maybe neither or both. Often speaking of/to the small or overlooked (weeds by a roadside, an abandoned silo), the poems orient themselves toward edges, transitional spaces like the one where fields shift into woods. Where does one body stop? *The Thicket* takes an interest in becoming, one thing flowing into something else. The University of Pittsburgh first fielded an intercollegiate basketball team in 1905, but an entire generation of fans has only heard or read about a small number of these colorful and outstanding players. An invitation to join the prestigious Big East Conference in 1982 opened the eyes of the nation to Panther basketball. Continuing a tradition of growth and excellence, the 2001-2002 Panthers again put University of Pittsburgh basketball on the map. Picked by the league coaches to finish sixth in the seven-team Big East Conference’s West Division, Ben Howland directed the team to an overall record of 29-6, earning the Panthers the West Division regular-season championship. The Panthers then advanced to the Sweet Sixteen of the NCAA Tournament for the first time in twenty-eight years. *Panther Pride: University of Pittsburgh Men's Basketball* is the pictorial history of Pittsburgh’s basketball program, before and since the Big East

Conference. Well before Dr. Roy Chipman, there was eccentric Doc Carlson. Long before All-American Charles Smith, there was Charley Hyatt. Twenty-eight years before Brandin Knight led his team to the Sweet Sixteen, Billy Knight led another remarkable Panther squad to the Elite Eight. From Motor Square Garden in East Liberty to the Pitt Stadium Pavilion and Fitzgerald Field House in Oakland, Pittsburgh basketball teams have provided their fans with exciting victories and heartbreaking defeats for close to a century. Companies across the world, for a variety of reasons, are committing to incorporating social responsibility into their business models and finding that their profits are growing and their long-term sustainability is enhanced—building "humanity" into their business models as the driver of economic, environmental, and social sustainability. This fascinating development is a widely observable global phenomenon. The "Business of Humanity®" (BoH) Proposition is the synthesis of counter-intuitive but simple and powerful ideas about how companies can add value in today's globalized and fast-changing world. The task of BoH Strategies is to overcome three critical challenges characterizing today's business environment, namely disruptive technologies, conflicted stakeholders, and unknowable futures. BoH Strategies are designed to convert these challenges into opportunities for enhanced sustainability on all three dimensions—economic, environmental and social. Written by leading experts with decades of experience, this book: Provides a hands-on understanding of how to implement this powerful and rewarding approach to simultaneously add economic value and enhance social benefit Includes the experiences and approaches of highly regarded business executives and successful organizations Responds to the critical challenges created by three environmental mega forces – the inevitability of globalization, the imperative of innovation, and the importance of shared value. This book is based on lessons drawn from the real world and provides a compelling rationale for the power of the BoH Proposition. The pragmatic framework and process offered enable companies to develop and confidently implement value-adding strategies based on the BoH Proposition. Although a technique for hydraulic fracturing—more commonly known as fracking—was developed and implemented in the 1970s in Texas, fracking of the Marcellus Shale formation that stretches from West Virginia through Pennsylvania to New York did not begin in earnest until the twenty-first century. Unconventional natural gas production via fracking has ignited debate, challenged regulators, and added to the complexity of twenty-first-century natural resource management. Through a longitudinal study taken from 2000 to 2015, Jonathan M. Fisk, Soren Jordan, and A. J. Good examine how the management of natural resources functions relative to specific regulatory actions including inspections, identifying violations, and the use of specific regulatory tools. Ultimately, they find that factors as disparate as state policy goals, elected officials, the availability of data, inspectors, front-line staff, and the use of technology form a context that, in turn, shapes the use of specific regulatory tools and decisions. Why does a country with religious liberty enmeshed in its legal and social structures produce such overt prejudice and discrimination against Muslims? Sahar Aziz's groundbreaking book demonstrates how race and religion intersect to create what she calls the Racial Muslim. Comparing discrimination against immigrant Muslims with the prejudicial treatment of Jews, Catholics, Mormons, and African American Muslims during the twentieth century, Aziz explores the gap between America's aspiration for and fulfillment of religious freedom. With America's demographics rapidly changing from a majority white Protestant nation to a multiracial, multireligious society, this book is an indispensable read for understanding how our past continues to shape our present—to the detriment of our nation's future. Very Short Introductions: Brilliant, Sharp, Inspiring Philosophy of physics is concerned with the deepest theories of modern physics - notably quantum theory, our theories of space, time and symmetry, and thermal physics - and their strange, even bizarre conceptual implications. A deeper understanding of these theories helps both physics, through pointing the way to new theories and new applications, and philosophy, through seeing how our worldview has to change in the light of what we learn from physics. This Very Short Introduction explores the core topics in philosophy of physics through three key themes. The first - the nature of space, time, and motion - begins by considering the philosophical puzzles that led Isaac Newton to propose the existence of absolute space, and then discusses how those puzzles change - but do not disappear - in the context of the revolutions in our understanding of space and time that came first from special, and then from general, relativity. The second - the emergence of irreversible behavior in statistical mechanics - considers how the microscopic laws of physics, which know of no distinction between past and future, can be compatible with the melting of ice, the cooling of coffee, the passing of youth, and all the other ways in which the large-scale world distinguishes past from future. The last section discusses quantum theory - the foundation of most of modern physics, yet mysterious to this day. It explains just why quantum theory is so difficult to make sense of, how we might nonetheless attempt to do it, and why the question has been highly relevant to the development of physics, and continues to be so. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable. Gone to Ground is an investigation into the material and political forces that transformed the cityscape of Dar es Salaam, Tanzania in the 1970s and early 1980s. It is both the story of a particular city and the history of a global moment of massive urban transformation from the perspective of those at the center of this shift. Built around an archive of newspapers, oral history interviews, planning documents, and a broad compendium of development reports, Emily Brownell writes about how urbanites navigated the state's anti-urban planning policies along with the city's fracturing infrastructures and profound shortages of staple goods to shape Dar's environment. They did so most frequently by "going to ground" in the urban periphery, orienting their lives to the city's outskirts where they could plant small farms, find building materials, produce charcoal, and escape the state's policing of urban space. Taking seriously as historical subject the daily hurdles of families to find housing, food, transportation, and space in the city, these quotidian concerns are drawn into conversation with broader national and transnational anxieties about the oil crisis, resource shortages, infrastructure, and African socialism. In bringing these concerns together into the same frame, Gone to Ground considers how the material and political anxieties of the era were made manifest in debates about building materials, imported technologies, urban agriculture, energy use, and who defines living and laboring in the city.

When people should go to the ebook stores, search start by shop, shelf by shelf, it is essentially problematic. This is why we allow the book compilations in this website. It will categorically ease you to see guide **Fem Example In Python University Of Pittsburgh** as you such as.
