This much anticipated new edition provides employers and employees with a day-to-day guide to reducing accidents and injuries, ensuring compliance, avoiding fines and penalties, and controlling workers' compensation costs. You'll not only find comprehensive discussions on all of the construction safety regulations found in the Code of Federal Regulations (CFR) Title 29 Chapter 1926, but you'll also find the actual legal text of the regulations and overviews for each sub Chapter for easier reference. This Construction Safety Handbook covers both the obvious and the hidden dangers of construction and addresses the latest changes in OSHA standards, including new recordkeeping requirements, new ergonomic guidelines, new requirements in the Steel Erection standard, and new additions to signs, signals, and barricades requirements. Written in plain English, this comprehensive handbook provides you with the legal background, practical advice, and ready-to-use written compliance programs you need to ensure your sites meet workplace safety requirements, protect workers, and comply with the standards. Each Chapter provides a description of the requirements of the standard, and a sample written compliance program, checklists, and the appropriate citations from the 29 CFRs. The latest changes in enforcement and inspection policy are also detailed, and a list of OSHA's most frequently cited construction standards is given. The author is one of the world's foremost experts, with nearly 35 years as a consultant specializing in safety research and hazard analysis. Written and edited by experienced construction industry professionals, the 'ICE Manual of Health and Safety in Construction' provides invaluable practical guidance on how hazards can be removed, controlled or managed, through all the stages of construction projects. This book addresses an increasingly important area in the construction industry. Case studies are used extensively to illustrate important points and refer to current successful safety management techniques. Harlan W. Fair has 68 years of experience in construction and civil engineering, including construction site safety. He

received his undergraduate and graduate degrees from Dartmouth College and the Thayer School of Engineering, graduating in 1954 with an MS in Civil Engineering. Following graduation, he was commissioned in the Navy Civil Engineer Corps at Officer Candidate School (OCS) in Newport, R.I. His first assignment was Maintenance Officer at Argentia, Newfoundland Harlan Naval Air Station where he was responsible for a Seabee Detachment and civilian work force. Following a Naval Reserve career, he retired as a captain in the Civil Engineer Corps. In 1957 he joined Turner Construction Company as a field engineer. In 1964 he was Project Engineer for Thompson Starrett Construction Company on the New York State Exhibit at the New York World's Fair. After assignments as Facility Director at Cornell Medical and New York Hospital, Director of Project Management for the New York Health and Hospital Corp and Project Manager on a consumables project in Oklahoma City for Xerox, he started his own construction and construction management business in the Metropolitan New York area. For the last 30 years he has managed his own construction firm, H. Fair Associates, Inc. which was a contractor, construction manager, and construction consultant. He bid and was awarded several projects at West Point, N.Y. including additions to the Fire House, Eisenhower Hall, and Shea Track Stadium. He developed condominiums in Chappaqua and Pelham, N.Y. along with construction of single-family residences and commercial buildings in Westchester County NY and Fairfield County CT. As a Forensic Engineer, he was an expert witness in cases involving construction accidents, construction performance, and safety issues. He has served both on arbitration panels and as a single arbitrator under the auspice of the American Arbitration Association (AAA) and was a member of the AAA National Dispute Resolution Committee. He retains his membership in the American Society of Civil Engineers (ASCE), National Society of Professional Engineers (NSPE), American Society of Safety Professionals (ASSP), National Academy of Forensic Engineers (NAFE), and National Fire Protection Association (NFPA). He is a professional engineer licensed in New York, New Hampshire, and Vermont, a Fellow in the American Society of Civil Engineers (ASCE), and a past chairman of the Crane Safety Committee. In 1998 the Committee published through the ASCE, "Crane Safety on Construction Sites." He continues to represent the ASCE to the American National Standards Institute (ANSI) A10 Committee which establishes consensus safety standards by representative organizations from the construction industry. He was formerly an alternate to the American Society of Mechanical Engineers (ASME) B30 Committee which establishes safety standards for cableways, cranes, derricks, hoists, hooks, jacks, and slings. Designing safety into every facet of your construction organization is not just sensible, it is also profitable.... Featuring proven safety management methods gathered from fifteen years of research at Stanford University and used by the most successful construction managers in the industry, Construction Safety Management is a comprehensive blueprint for CEOs, job-site managers, foremen, safety professionals, and owners on safely managing construction work at every level and phase of a project. Incorporating these management practices and policies into a practical format of real-life case studies and summary action steps, this new updated Second Edition offers each member of the construction management team specific advice on effectively upgrading an organization's total safety performance, including: * Building a corporate culture of zero accidents * Planning for high project performance * Establishing accountability for safety * Eliminating drugs and alcohol from the job site * Maintaining a communications safety net * Achieving the dual goal of safety and productivity * Maintaining effective crews * Measuring safety performance * Monitoring contractors for safety This new edition also reviews key requirements of the Comprehensive Safety and Health Reform Act of 1993 and discusses the potential of emerging management techniques and computing technologies for construction safety management, including Total Quality Management, partnering,

robotics, automated process control, artificial intelligence, and expert systems. "The Second Edition is even better than the first. The information is timely but what's even more important, the techniques work!" Raymond Hays, Director Environmental Safety and Health/QA RUST Construction Services "The detailed guidance provided throughout the book will enable all segments and levels of the construction industry to increase productivity." Jim E. Lapping Director, Safety and Health Building and Construction Trades Department AFL-CIO A close-to-ideal blend of suburb and city, speedy construction of towers of Babylon, the sparkling proportion of glass and steel buildings' facade at night showcase the wisdom of humans. They also witness the footsteps, sweats and tears of architects and engineers. Unfortunately, these signatures of human civilizations are swathed in towering figures of construction accidents. Fretting about these on sites, different countries adopt different measures on sites. This book firstly sketches the construction accidents on sites, followed by a review on safety measures in some of the developing countries such as Bermuda, Egypt, Kuwait and China; as well as developed countries, for example, the United States, France and Singapore. It also highlights the enormous compensation costs with the courts' experiences in the United Kingdom and Hong Kong. The global construction sector is infamous for high levels of injuries, accidents and fatalities, and poor health and well-being of its workforce. While this record appears in both developed and developing countries, the situation is worse in developing countries, where major spending on infrastructure development is expected. There is an urgent need to improve construction health and safety (H&S) in developing countries. The improvement calls for the development of context-specific solutions underpinned by research into challenges and related solutions. This edited volume advances the current understanding of construction H&S in developing countries by revealing context-specific issues and challenges that have hitherto not been well explored in the literature, and applying emergent H&S management approaches and practices in developing countries. Coverage includes countries from the regions of sub-Saharan Africa, Latin America, Asia and Europe. This book, which is the first compendium of research into construction H&S issues in developing countries, adds considerable insight into the field and presents innovative solutions to help address poor H&S in construction in developing nations. It is a must read for all construction professionals, researchers and practitioners interested in construction and occupational H&S, safety management, engineering management and development studies. Construction work-site safety is an important part of a builder's cost of doing business. This text is a guide to managing residential and light commercial construction safety. It addresses why and how contractors must educate themselves and their crews to practice safety at work. The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done? Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations. This is the only comprehensive resource on how to safety assemble and operate elevated scaffolds and work platforms on the job site--with 250 illustrations, tip boxes, and checklists. (Midwest).
