This book is concerned with the exploration of the psychology of humor and laughter by the foremost professional researchers in these areas. The chapters themselves range from cognitive aspects of humor development, through the functions of humor and laughter in social interaction, to the use of humor by comedians and by the mass media. One of the general features of the volume is the concern with the variety of techniques and research methods which are used in studies aimed at understanding our responsiveness to humor and the contexts in which we create it. Humor and Laughter contains chapters by psychologists with longstanding research interests in humor and laughter, including Thomas R. Shultz, Mary K. Rothbart, Goran Nerhardt, Michael Godkewitsch, Walter E. O'Connell, and Harvey Mindess. Handbook for Theory, Research, and Practice in Gestalt Therapy Apr 19 2022 Many books have been written about gestalt therapy. Not many have been written on the relationship between gestalt therapy and psychotherapy research. The Handbook for Theory, Research, and Practice in Gestalt Therapy is a needed bridge between these two concerns, and a timely addition to scholarly literature on gestalt therapy itself. In 2007 an international team of experienced gestalt therapists devoted themselves to create this book, and they have collaborated with one another to produce a challenging and enriching addition to the literature relevant to gestalt therapy. The book discusses the philosophy of science, the need for research specifically focused on gestalt therapy, and the critical realism and natural attitude found in both research and gestalt praxis. It provides discussions of qualitative and quantitative research, describes the methods of gestalt therapy as based in a unified theory, and illustrates the application of research in the contexts of emerging gestalt research communities. The discussion contained in this book is needed at a time when warrant for the practice of psychotherapy is increasingly sought in the empirical support available through psychotherapy research—the so called evidence-based movement—and at a time when public policy is increasingly driven by the call for "what works."

Thinking with Theory in Qualitative Research Jan 04 2021 Winner of the 2013 American Educational Studies Association's Critics Choice Award! Thinking With Theory In Qualitative Research shows how to use various philosophical concepts in practices of inquiry; effectively opening up the process of data analysis in qualitative research. It uses a common data set and utilizes various theoretical perspectives through which to view the data. It challenges qualitative researchers to use theory to accomplish a rigorous, analytic reading of qualitative data. "Plugging in" the theory and the data produces a variety of readings applying various theorists and their concepts, including: Derrida - Deconstruction Spivak – Postcolonial Marginality Foucault - Power/Knowledge Butler - Performativity Deleuze – Desire Barad – Material Intra-activity Thinking With Theory In Qualitative Research pushes against traditional qualitative data analysis such as mechanistic coding, reducing data to themes, and writing up transparent narratives. These do little to critique the complexities of social life; such simplistic approaches preclude dense and multi-layered treatment of data. It shows that "thinking with theory" pushes research and data and theory to its exhaustion in order to produce knowledge differently. By refusing a closed system for fixed meaning, a new analytic is engaged to keep meaning on the move. The result is an extension of thought beyond an easy sense. Special features of the book include schematic cues to help guide the reader through what might be new theoretical terrain, interludes that explain the possibilities of thinking with a particular concept and theorist and detailed chapters that plug the same data set into a specific concept. This vital tool will help researchers understand and fully utilize their powers of data analysis and will prove invaluable to both students and experienced researchers across all of the social sciences.

Motivation: Theory and Research Jul 22 2022 Designed for professionals and graduate students in the personality/social, military, and educational psychology, and assessment/evaluation communities, this volume explores the state of the art in motivational research for

individuals and teams from multiple theoretical viewpoints as well as their effects in both schools and training environments. The great majority of education and training R&D is focused on the cognitive dimensions of learning, for instance, the acquisition and retention of knowledge and skills. Less attention has been given in the literature and in the design of education and training itself to motivational variables and their influence on performance. As such, this book is unique in the following montage of factors: * a focus on motivation of teams or groups as well as individuals; * an examination of the impact of motivation on performance (and, thus, also on cognition) rather than only on motivation itself; * research in training as well as educational settings. The data reported were collected in various venues including schools, laboratories and field settings. The chapter authors are the researchers that, in many cases, have defined the state of the art in motivation.

Social Capital Dec 03 2020 Leading scholars in the field of social networks from diverse disciplines present the first systematic and comprehensive collection of current theories and empirical research on the informal connections that individuals have for support, help, and information from other people. Expanding on concepts originally formulated by Pierre Bourdieu and James Coleman, this seminal work will find an essential place with educators and students in the fields of social networks, rational choice theory, institutions, and the socioeconomics of poverty, labor markets, social psychology, and race. The volume is divided into three parts. The first segment clarifies social capital as a concept and explores its theoretical and operational bases. Additional segments provide brief accounts that place the development of social capital in the context of the family of capital theorists, and identify some critical but controversial perspectives and statements regarding social capital in the literature. The editors then make the argument for the network perspective, why and how such a perspective can clarify controversies and advance our understanding of a whole range of instrumental and expressive outcomes. Social Capital further provides a forum for ongoing research programs initiated by social scientists working at the crossroads of formal theory and new methods. These scholars and programs share certain understandings and approaches in their analyses of social capital. They argue that social networks are the foundation of social capital. Social networks simultaneously capture individuals and social structure, thus serving as a vital conceptual link between actions and structural constraints, between micro- and macro-level analyses, and between relational and collective dynamic processes. They are further cognizant of the dual significance of the "structural" features of the social networks and the "resources" embedded in the networks as defining elements of social capital.

Evidence-Based Policymaking Jul 10 2021 New thinking is needed on the age-old conundrum of how to connect research and policymaking. Why does a disconnect exist between the research community, which is producing thousands of studies relevant to public policy, and the policy community, which is making thousands of decisions that would benefit from research evidence? The second edition updates community dissonance theory and provides an even stronger, more substantiated story of why research is

underutilized in policymaking, and what it will take to connect researchers and policymakers. This book offers a fresh look into what policymakers and the policy process are like, as told by policymakers themselves and the researchers who study and work with them. New to the second edition: • The point of view of policymakers is infused throughout this book based on a remarkable new study of 225 state legislators with an extraordinarily high response rate in this hard-to-access population. • A new theory holds promise for guiding the study and practice of evidence-based policy by building on how policymakers say research contributes to policymaking. • A new chapter features pioneering researchers who have effectively influenced public policy by engaging policymakers in ways rewarding to both. • A new chapter proposes how an engaged university could provide culturally competent training to create a new type of scholar and scholarship. This review of state-of-the-art research on evidence-based policy is a benefit to readers who find it hard to keep abreast of a field that spans the disciplines of business, economics, education, family sciences, health services, political science, psychology, public administration, social work, sociology, and so forth. For those who study evidence-based policy, the book provides the basics of producing policy relevant research by introducing researchers to policymakers and the policy process. Strategies are provided for identifying research questions that are relevant to the societal problems that confront and confound policymakers. Researchers will have at their fingertips a breath-taking overview of classic and cutting-edge studies on the multi-disciplinary field of evidence-based policy. For instructors, the book is written in a language and style that students find engaging. A topic that many students find mundane becomes germane when they read stories of what policymakers are like, and when they learn of researcher's tribulations and triumphs as they work to build evidence-based policy. To point students to the most important ideas, the key concepts are highlighted in text boxes. For those who desire to engage policymakers, a new chapter summarizes the breakthroughs of several researchers who have been successful at driving policy change. The book provides 12 innovative best practices drawn from the science and practice of engaging policymakers, including insights from some of the best and brightest researchers and science communicators. The book also takes on the daunting task of evaluating the effectiveness of efforts to engage policymakers around research. A theory of change identifies seven key elements that are fundamental to increasing policymaker's use of research along with evaluation protocols and preliminary evidence on each element.

Place in Research Sep 12 2021 Bridging environmental and Indigenous studies and drawing on critical geography, spatial theory, new materialist theory, and decolonizing theory, this dynamic volume examines the sometimes overlooked significance of place in social science research. There are often important divergences and even competing logics at work in these areas of research, some which may indeed be incommensurable. This volume explores how researchers around the globe are coming to terms - both theoretically and practically - with place in the context of settler colonialism, globalization, and environmental degradation. Tuck and McKenzie outline a trajectory of critical place inquiry that not only furthers empirical knowledge, but ethically imagines new possibilities for collaboration and action. Critical place inquiry can involve a range of research methodologies; this volume argues that what matters is how the chosen methodology engages conceptually with place in order to mobilize methods that enable data collection and analyses that address place explicitly and politically. Unlike other approaches that attempt to superficially tag on Indigenous concerns, decolonizing conceptualizations of land and place and Indigenous methods are central, not peripheral, to practices of critical place inquiry.
