INTRODUCTION TO PHYSICAL ANTHROPOLOGY brings the study of physical anthropology to life! With a focus on the big picture of human evolution, the 15th Edition helps you master the basic principles of the subject and arrive at an understanding of the human species and its place in the biological world. Each chapter begins with new Student Learning Objectives and a chapter outline to help you focus your study time. Each chapter then ends with an expanded section of How Do We Know?, followed by a critical thinking question, designed to help cement your understanding of the concepts. Chapter-by-chapter resources for the student, including learning objective outlines, fill-in-the-blank chapter outlines, key terms, and extensive opportunities for self-quizzing. Environmental Anthropology studies historic and present human-environment interactions. This volume illustrates

the ways in which today's environmental anthropologists are constructing new paradigms for understanding the multiplicity of players, pressures, and ecologies in every environment, and the value of cultural knowledge of landscapes. This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections. As the contributions to this Handbook demonstrate, the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways. As a discipline concerned primarily with human-environment interaction, environmental anthropologists recognize that we are now working within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world. As we see in the breadth of topics presented in this volume, these environmental challenges have inspired renewed foci on traditional topics such as food procurement, ethnobiology, and spiritual ecology; and a broad new range of subjects, such as resilience, nonhuman rights, architectural anthropology, industrialism, and education. This volume enables scholars and students quick access to both established and trending environmental anthropological explorations into theory, methodology and practice. This collection explores the intersections between anthropology and film festival studies. Film and anthropology scholars map ethnographic film festivals and ethnographic approaches to festivals worldwide. The book provides a historical reconstruction of most of the main festivals exhibiting ethnographic film, considering the parallel evolution of programming and

organisational practices across the globe. It also addresses the great value and challenges of ethnographic research tools for studying the wide-ranging field of film festivals. This volume is the first to collect long-term experiences of curating and exhibiting ethnographic film, as well as new approaches to the understanding of film festival practices. Its contributions reflect on curatorial practices within visual anthropology and their implications for ethnographic filmmaking, and they shed light on problems of cultural translation, funding, festival audiences and the institutionalisation of ethnographic cinema. The book offers a novel perspective on film festivals as showcases for cinema, socio-cultural hubs and distribution nodes. Aimed at anthropologists, media scholars, festival organisers and documentary film professionals, it offers a starting point for the study of ethnographic film exhibition within its cultural and social contexts.

Ethics in business is a major topic both in the social sciences and in business itself. Anthropologists, long attendant to the intersection of ethics and practice, are particularly well suited to offer vital insights on the subject. This timely collection considers a range of ethical issues in business through the examination of anthropologically informed theory and case examples. The meaning of ethical values, practices, and education are explored, as well as practical ways of implementing them, while the specific ethical challenges of industries such as advertising, market research, and design are considered. Contributions from anthropologists in business and academia promise a broad range of perspectives and add to the growing discussion on the ways anthropologists study, work, teach, and engage in a variety of industry settings. Engagingly written,

Ethics in the Anthropology of Business will be of interest to a wide variety of audiences, including practicing anthropologists, current and future business leaders, and scholars and students from a range of social sciences. The field of anthropology, Anand Pandian argues, has resources essential for this critical and imaginative task. Anthropology is no stranger to injustice and exploitation. Still, its methods can reveal unseen dimensions of the world at hand and radical experience as the seed of a humanity yet to come. A Possible Anthropology is an ethnography of anthropologists at work: canonical figures like Bronislaw Malinowski and Claude Lévi-Strauss, ethnographic storytellers like Zora Neale Hurston and Ursula K. Le Guin, contemporary scholars like Jane Guyer and Michael Jackson, and artists and indigenous activists inspired by the field. In their company, Pandian explores the moral and political horizons of anthropological inquiry, the creative and transformative potential of an experimental practice. This anthology represents the culmination of a series of public discussions with some of the leading international anthropologists of today —organized by the editor, Sindre Bangstad—at the House of Literature in Oslo, Norway. Thus, it provides fresh and original insights into the lives and work of these leading scholars. It

features conversations with Didier Fassin, Angelique Haugerud, Ruben Andersson, Claudio Lomnitz, David Price, Magnus Marsden, Richard Ashby Wilson, and Parvis Ghassem-Fachandi, in addition to an introduction by Sindre Bangstad and a preface by Thomas Hylland Eriksen. In recent years, crucial questions have been raised about anthropology as a discipline, such as whether ethnography is central to the subject, and how imagination, reality and truth are joined in anthropological enterprises. These interventions have impacted anthropologists and scholars at large. This volume contributes to the debate about the interrelationships between ethnography and anthropology and takes it to a new plane. Six anthropologists with field experience in Egypt, Greece, India, Laos, Mauritius, Thailand and Switzerland critically discuss these propositions in order to renew anthropology for the future. The volume concludes with an Afterword from Tim Ingold. The contributors explore diverse contexts of performance to discuss peoples' own reflections on political subjectivities, governance and development. The volume refocuses anthropological engagement with ethics, aesthetics, and politics to examine the transformative potential of political performance, both for individuals and wider collectives. Concise, well-balanced, and comprehensive, **ESSENTIALS OF PHYSICAL ANTHROPOLOGY**, 10th Edition, introduces you to physical anthropology with the goal of helping you understand why it is important to know about human evolution. You'll learn how humans are biologically connected to all other life, including our ancient ancestors and our contemporary primate cousins, and how closely modern human populations are related to each other. Numerous high-quality visual diagrams, artwork, maps,

photographs, and other learning tools will help you grasp the big picture of human evolution. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Going beyond the division of nature and society, this unique book explores human life as a process of biosocial becoming. Based on a Wenner-Gren international workshop, held at the Royal Ontario Museum, this book addresses the complexity of human-mineral engagements through ethnographic case studies and anthropological reflections on different people and the minerals they deem 'precious.' The Routledge Handbook of Anthropology and Reproduction is a comprehensive overview of the topics, approaches, and trajectories in the anthropological study of human reproduction. The book brings together work from across the discipline of anthropology, with contributions by established and emerging scholars in archaeological, biological, linguistic, and sociocultural anthropology. Across these areas of research, consideration is given to the contexts, conditions, and contingencies that mark and shape the experiences of reproduction as always gendered, classed, and racialized. Over 39 chapters, a diverse range of international scholars cover topics including: Reproductive governance, stratification, justice, and freedom. Fertility and infertility. Technologies and imaginations. Queering reproduction. Pregnancy, childbirth, and reproductive loss. Postpartum and infant care. Care, kinship, and alloparenting. This is a valuable reference for scholars and upper-level students in anthropology and related disciplines associated with reproduction, including sociology, gender studies, science and technology studies, human development and family studies, global health,

public health, medicine, medical humanities, and midwifery and nursing. Covering the essential concepts that drive cultural anthropology today, Ken Guest's *Cultural Anthropology: A Toolkit for a Global Age* shows students that now, more than ever, global forces affect local culture and that the tools of cultural anthropology are essential to living in a global society. A "toolkit" approach encourages students to pay attention to big questions raised by anthropologists, offers study tools to remind readers what concepts are important, and shows them why it all matters in the real world. *Cultural Anthropology: Global Forces, Local Lives* presents all the key areas of cultural anthropology as well as providing original and nuanced coverage of current and cutting-edge topics. An exceptionally clear and readable introduction, it helps students understand the application of anthropological concepts to the contemporary world and everyday life. Thorough treatment is given throughout the text to issues such as globalization, colonialism, ethnicity, nationalism, neoliberalism, and the state. Changes for the third edition include a brand new chapter on medical anthropology and an updated range of cases studies with a fresh thematic focus on China. The book contains a number of features to support student learning, including: A wealth of color images Definitions of key terms and further reading suggestions in the margins Summaries at the end of every chapter An extensive glossary, bibliography and index. This Handbook engages the reader in the major debates, approaches, methodologies, and explanatory frames within political anthropology. Examining the shifting borders of a moving field of enquiry, it illustrates disciplinary paradigm shifts, the role of humans in political structures, ethnographies of the

political, and global processes. Reflecting the variety of directions that surround political anthropology today, this volume will be essential reading to understanding the interactions of humans within political frames in a globalising world. Can forests think? Do dogs dream? In this astonishing book, Eduardo Kohn challenges the very foundations of anthropology, calling into question our central assumptions about what it means to be human—and thus distinct from all other life forms. Based on four years of fieldwork among the Runa of Ecuador's Upper Amazon, Eduardo Kohn draws on his rich ethnography to explore how Amazonians interact with the many creatures that inhabit one of the world's most complex ecosystems. Whether or not we recognize it, our anthropological tools hinge on those capacities that make us distinctly human. However, when we turn our ethnographic attention to how we relate to other kinds of beings, these tools (which have the effect of divorcing us from the rest of the world) break down. *How Forests Think* seizes on this breakdown as an opportunity. Avoiding reductionistic solutions, and without losing sight of how our lives and those of others are caught up in the moral webs we humans spin, this book skillfully fashions new kinds of conceptual tools from the strange and unexpected properties of the living world itself. In this groundbreaking work, Kohn takes anthropology in a new and exciting direction—one that offers a more capacious way to think about the world we share with other kinds of beings.

The Oxford Handbook of Law and Anthropology is a ground-breaking collection of essays that provides an original and internationally framed conception of the historical, theoretical, and ethnographic interconnections of law and anthropology. Each of the chapters in

the Handbook provides a survey of the current state of scholarly debate and an argument about the future direction of research in this dynamic and interdisciplinary field. The structure of the Handbook is animated by an overarching collective narrative about how law and anthropology have and should relate to each other as intersecting domains of inquiry that address such fundamental questions as dispute resolution, normative ordering, social organization, and legal, political, and social identity. The need for such a comprehensive project has become even more pressing as lawyers and anthropologists work together in an ever-increasing number of areas, including immigration and asylum processes, international justice forums, cultural heritage certification and monitoring, and the writing of new national constitutions, among many others. The Handbook takes critical stock of these various points of intersection in order to identify and conceptualize the most promising areas of innovation and sociolegal relevance, as well as to acknowledge the points of tension, open questions, and areas for future development.

Winner of the CHOICE Outstanding Academic Title of the Year Award 2017. Interest in the anthropology of food has grown significantly in recent years. This is the first handbook to provide a detailed overview of all major areas of the field. 20 original essays by leading figures in the discipline examine traditional areas of research as well as cutting-edge areas of inquiry. Divided into three parts – Food, Self and Others; Food Security, Nutrition and Food Safety; Food as Craft, Industry and Ethics – the book covers topics such as identity, commensality, locality, migration, ethical consumption, artisanal foods, and children's food. Each chapter features rich ethnography alongside wider analysis of the

subject. Internationally renowned scholars offer insights into their core areas of specialty. Examples include Michael Herzfeld on culinary stereotypes, David Sutton on how to conduct an anthropology of cooking, Johan Pottier on food insecurity, and Melissa Caldwell on practicing food anthropology. The book also features exceptional geographic and cultural diversity, with chapters on South Asia, South Africa, the United States of America, post-socialist societies, Maoist China, and Muslim and Jewish foodways. Invaluable as a reference as well as for teaching, *The Handbook of Food and Anthropology* serves to define this increasingly important field. An essential resource for researchers and students in anthropology and food studies.

Looking at anthropologists at work, this book investigates what kind of morality they perform in their occupations and what the impact of this morality is. The book includes ethnographic studies in four professional arenas: health care, business, management and interdisciplinary research. The discussion is positioned at the intersection of ‘applied or public anthropology’ and ‘the anthropology of ethics’ and analyses the ways in which anthropologists can carry out ‘moral work’ both inside and outside of academia. This journal has been discontinued. Any issues are available to purchase separately. *The Time of Anthropology* provides a series of compelling anthropological case studies that explore the different temporalities at play in the scientific discourses, governmental techniques and policy practices through which modern life is shaped. Together they constitute a novel analysis of contemporary chronopolitics. The contributions focus on state power, citizenship, and ecologies of time to reveal the scalar properties of chronopolitics as it shifts

between everyday lived realities and the macro-institutional work of nation states. The collection charts important new directions for chronopolitical thinking in the future of anthropological research. The first edition of *Anthropology and Climate Change* (2009) pioneered the study of climate change through the lens of anthropology, covering the relation between human cultures and the environment from prehistoric times to the present. This second, heavily revised edition brings the material on this rapidly changing field completely up to date, with major scholars from around the world mapping out trajectories of research and issuing specific calls for action. The new edition introduces new “foundational” chapters—laying out what anthropologists know about climate change today, new theoretical and practical perspectives, insights gleaned from sociology, and international efforts to study and curb climate change—making the volume a perfect introductory textbook; presents a series of case studies—both new case studies and old ones updated and viewed with fresh eyes—with the specific purpose of assessing climate trends; provides a close look at how climate change is affecting livelihoods, especially in the context of economic globalization and the migration of youth from rural to urban areas; expands coverage to England, the Amazon, the Marshall Islands, Tanzania, and Ethiopia; re-examines the conclusions and recommendations of the first volume, refining our knowledge of what we do and do not know about climate change and what we can do to adapt.

**INTRODUCTION TO PHYSICAL ANTHROPOLOGY** 2013-2014 Edition continues to present the most up-to-date, balanced, and comprehensive introduction to the field, combining an engaging writing style and compelling visual

content to bring the study of physical anthropology to life for today's students. With a focus on the big picture of human evolution, the text helps students master the basic principles of the subject and arrive at an understanding of the human species and its place in the biological world. This book continues to keep pace with changes in the field, with new material on genetic technology and other topics reflecting recent scientific findings. In this edition, the unifying concept of our "connection" to all life has been integrated as a framework for presenting the material throughout the text. To further reinforce this central focus, each chapter now opens with a pedagogical aid that clearly shows students the biological connections as they are organized within and between chapters. Contemporary anthropology has changed drastically in the new millennium, expanding beyond the anachronistic study of "primitive" societies to confront the burning social, economic, and political challenges of the day. In the process, anthropologists often come face to face with issues that require them to take a public position—issues such as race and tolerance, health and well-being, food security, reconciliation and public justice, global terror and militarism, and digital media. This comprehensive but accessible book is both an interesting read and an excellent overview of public anthropology. In-depth case studies offer an opportunity to evaluate the pros and cons of engaging with public issues, while profiles of select anthropologists ensure the book is contemporary, but rooted in the history of the discipline.

During the last two decades, the number of anthropological studies on the Middle East has increased exponentially. This partially annotated bibliography offers a comprehensive survey of studies written in English, French and German, and covers the period from 1965 to 1987.

*A Companion to the Anthropology of Environmental Health* presents a collection of readings that utilize a medical anthropological approach to explore the interface of humans and the environment in the shaping of health and illness around the world. Features the latest ethnographic research from around the world related to the multiple impacts of the environment on health and of societies on their environments. Includes contributions from international medical anthropologists, conservationists, environmental experts, public health professionals, health clinicians, and other social scientists. Analyzes the conditions of cultural and social transformation that accompany environmental and ecological impacts in all areas of the world. Offers critical

perspectives on theoretical and methodological advancements in the anthropology of environmental health, along with future directions in the field. All humans share certain components of tooth structure, but show variation in size and morphology around this shared pattern. This book presents a worldwide synthesis of the global variation in tooth morphology in recent populations. Research has advanced on many fronts since the publication of the first edition, which has become a seminal work on the subject. This revised and updated edition introduces new ideas in dental genetics and ontogeny and summarizes major historical problems addressed by dental morphology. The detailed descriptions of 29 dental variables are fully updated with current data and include details of a new web-based application for using crown and root morphology to evaluate ancestry in forensic cases. A new chapter describes what constitutes a modern human dentition in the context of the hominin fossil record. An Indispensable Resource on Advanced Methods of Analysis of Human Skeletal and Dental Remains in Archaeological and Forensic Contexts Now in its third edition, *Biological Anthropology of the Human Skeleton* has become a key reference for bioarchaeologists, human osteologists, and paleopathologists throughout the world. It builds upon basic skills to provide the foundation for advanced scientific analyses of human skeletal remains in cultural, archaeological, and theoretical contexts. This new edition features updated coverage of topics including histomorphometry, dental morphology, stable isotope methods, and ancient DNA, as well as a number of new chapters on paleopathology. It also covers bioarchaeological ethics, taphonomy and the nature of archaeological assemblages, biomechanical analyses of

archaeological human skeletons, and more. Fully updated and revised with new material written by leading researchers in the field Includes many case studies to demonstrate application of methods of analysis Offers valuable information on contexts, methods, applications, promises, and pitfalls Covering the latest advanced methods and techniques for analyzing skeletal and dental remains from archaeological discoveries, *Biological Anthropology of the Human Skeleton* is a trusted text for advanced undergraduates, graduate students, and professionals in human osteology, bioarchaeology, and paleopathology. Integrating historical, biological, archaeological, and applied approaches with ethnographic data from around the world, *Anthropology: A Global Perspective* is founded on four essential themes: the diversity of human societies; the similarities that tie all humans together; the interconnections between the sciences and humanities; and a new theme addressing psychological essentialism. Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined, explicitly emphasizing the dynamic interaction between humans and their larger social, cultural, and physical environments. The biocultural approach emerged in anthropology in the 1960s, matured in the 1980s, and is now one of the dominant paradigms in anthropology, particularly within biological anthropology. This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential, productive, and important areas of research within biocultural anthropology. These are: critical and synthetic approaches within biocultural anthropology; biocultural approaches to identity, including race and racism; health, diet, and

nutrition; infectious disease from antiquity to the modern era; epidemiologic transitions and population dynamics; and inequality and violence studies. Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely, widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach, and synthetic in its coverage of contemporary scholarship in biocultural anthropology. Students will be able to grasp the history of the biocultural approach, and how that history continues to impact scholarship, as well as the scope of current research within the approach, and the foci of biocultural research into the future. Importantly, contributions in the text follow a consistent format of a discussion of method and theory relative to a particular aspect of the above six topics, followed by a case study applying the surveyed method and theory. This structure will engage students by providing real world examples of anthropological issues, and demonstrating how biocultural method and theory can be used to elucidate and resolve them. Key features include: Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples. Comprehensive treatment of diverse topics within biocultural anthropology, from human variation and adaptability to recent disease pandemics, the embodied effects of race and racism, industrialization and the rise of allergy and autoimmune diseases, and the sociopolitics of slavery and torture. Contributions and sections united by thematically cohesive threads. Clear, jargon-free language in a text that is designed to be

pedagogically flexible: contributions are written to be both understandable and engaging to both undergraduate and graduate students. Provision of synthetic theory, method and data in each contribution. The use of richly contextualized case studies driven by empirical data. Through case-study driven contributions, each chapter demonstrates how biocultural approaches can be used to better understand and resolve real-world problems and anthropological issues.

This book continues to keep pace with changes in the field, with new material on genetic technology and other topics reflecting recent scientific findings. In this edition, the unifying concept of our "connection" to all life has been integrated as a framework for presenting the material throughout the text. Global environmental change and recent worldwide infectious-disease outbreaks make the ecological perspective of medical anthropology more important a field of study than ever. In this premier teaching text, authors Ann McElroy and Patricia K. Townsend integrate biocultural, environmental, and evolutionary approaches to the study of human health, providing a complete and authoritative ecological perspective that is essential for interpreting medical anthropology. Research by biological anthropologists, archaeologists, and

paleopathologists illuminates the history and prehistory of disease, along with coverage of contemporary health issues, both local and global. This sixth edition is thoroughly revised and updated, with expanded discussion on the interaction of environment and infectious disease; new material on climate change, globalization, and the effects of war on physical and mental health; and an entirely new chapter on ethics in community health and medical anthropology. *Medical Anthropology in Ecological Perspective* captures the essentials of the discipline and covers its ever-changing topics, trends, and developments in an engaging, accessible way.
