This research-based K-6 program is built to provide instruction on the Common Core Standards, and includes special emphasis on the Mathematical Practices and Learning Progressions at every grade level. Based on the NSF-funded Children's Math Worlds project and over 10 years of research, Math Expressions is proven to be effective in raising student achievement. Hands-on and inquiry driven, Math Expressions Common Core teaches students how to represent solutions and explain their answers. This approach helps develop problem-solving and reasoning skills. The strong emphasis in Math Expressions on representation and discussion opens up the world of mathematics to all learners. Every lesson includes intervention, on-level, and challenge differentiation to support classroom needs. - Publisher. The purpose of this book is to supply students with supplemental learning tools for working with expressions and equations. This workbook is meant to complement standard curriculum. By working with the Problem Solving Maps, students will learn an alternate approach to solving math problems that will apply to both current challenges and future learning. In Expressions and Equations, students expand their previous knowledge of arithmetic to include basic algebraic expressions. Students will learn and evaluate whole-number exponents. They will generate and identify expressions, equations, and inequalities with variables. Students will also learn to write and solve equations as well as express equivalency. Students will learn to interpret dependent and independent variables while demonstrating quantitative relationships between these variables. The Problem Solving Maps will provide a consistent framework for students to think strategically about their work and apply consistent principles to solving these problems.
