BIO 50

breaks with the traditional system of awards, choosing instead to award collaboration, its process and outcomes. Recognizing the idea that design is a discipline that permeates all layers of contemporary life, BIO launches an unprecedented effort to engage designers and agents from Slovenia and abroad in a collaborative approach that will address themes that affect everyday life. Guided by a group of mentors from various disciplines, eleven teams have tackled the topics Affordable Living Knowing Food Public Water, Public Space Walking the City Hidden Crafts The Fashion System Hacking Households Nanotourism Engine Blocks Observing Space Designing Life Each team has created specific projects that are developed and implemented during the Biennial. Drawing from the complex network generated around BIO 50, "Designing Everyday Life" serves as a reader, compiling written and visual material on the many layers that compose the biennial. Notes, essays, and interviews, along with sketches, photographs, and diagrams, are aggregating the manifold dimensions of each team's collaborative work process, and illuminate strategies and roles for design in a contemporary world. An opening section introduces the topics discussed throughout the different components of the publication, arguing new priorities for the design discipline in contemporary times. Essays and visual material come together to articulate new roles for a discipline that has changed beyond the universe of mass-made products and solutions, and instead inhabits a fundamentally new universe in a series of small-scale, customized scenarios. Exploring the changing definition of design will illuminate its possible future. The concluding chapter reflects on the history and legacy of the world's oldest design event. It uses the history of BIO as an opportunity to explore changes in the last fifty years within the design discipline, western society and everyday life. With contributions by Slovenian and international experts, a series of reflections on BIO as a meeting point for design between East and West in Central Europe allow to extrapolate conclusions about European design in the immediate future. "Designing Everyday Life" also features interviews with Alice Rawsthorn, design critic at New York Times, Konstantin Grcic, industrial designer, and Sasa Machtig, industrial designer. MAO co-produces "Designing Everyday Life" with "Z33," a space for contemporary art based in the Belgian city of Hasselt. Since 2002, Z33 has been realizing projects and exhibitions that encourage visitors to see everyday things in a new way. <http://www.z33.be/en/z33/mission> "Balanis" second edition of Advanced Engineering Electromagnetics – a global best-seller for over 20 years – covers the advanced knowledge engineers involved in electromagnetic need to know, particularly as the topic relates to the fast-moving, continually evolving, and rapidly expanding field of wireless

Luis Moura and Izzat Darwazeh introduce linear circuit modelling and analysis applied to both electrical and electronic circuits, starting with DC and progressing up to RF, considering noise analysis along the way. Avoiding the tendency of current textbooks to focus either on the basic electrical circuit analysis theory (DC and low frequency AC frequency range), on RF circuit analysis theory, or on noise analysis, the authors combine these subjects into the one volume to provide a comprehensive set of the main techniques for the analysis of electric circuits in these areas. Taking the subject from a modelling angle, this text brings together the most common and traditional circuit analysis techniques (e.g. phasor analysis) with system and signal theory (e.g. the concept of system and transfer function), so students can apply the theory for analysis, as well as modelling of noise, in a broad range of electronic circuits. A highly student-focused text, each chapter contains exercises, worked

examples and end of chapter problems, with an additional glossary and bibliography for reference. A balance between concepts and applications is maintained throughout. Luis Moura is a Lecturer in Electronics at the University of Algarve. Izzat Darwazeh is Senior Lecturer in Telecommunications at University College, London, previously at UMIST. An innovative approach fully integrates the topics of electrical and RF circuits, and noise analysis, with circuit modelling. Highly student-focused, the text includes exercises and worked examples throughout, along with end of chapter problems to put theory into practice *** FREE for a limited time only ***

Electrodynamics is the most student-friendly book on Electrodynamics ever written. Here ' s why. First of all, it's is nothing like a formal university lecture. Instead, it ' s like a casual conversation with a more experienced student. This also means that nothing is assumed to be “ obvious ” or “ easy to see ” . Each chapter, each section, and each page focusses solely on the goal to help you understand. Nothing is introduced without a thorough motivation and it is always clear where each formula comes from. The book contains no fluff since unnecessary content quickly leads to confusion. Instead, it ruthlessly focusses on the fundamentals and makes sure you ' ll understand them in detail. The primary focus on the readers ' needs is also visible in dozens of small features that you won ' t find in any other textbook. In total, the book contains more than 100 illustrations that help you understand the most important concepts visually. In each chapter, you ' ll find fully annotated equations and calculations are done carefully step-by-step. This makes it much easier to understand what ' s going on in. Whenever a concept is used which was already introduced previously, there is a short sidenote that reminds you where it was first introduced and often recites the main points. In addition, there are summaries at the beginning of each chapter that make sure you won ' t get lost.
