The acid metabolism of certain succulent plants, now known as Crassulacean Acid Metabolism (CAM) has fascinated plant physiologists and biochemists for the last one and a half centuries. However, since the basic discoveries of De Saussure in 1804 that stem joints of *Opuntia* were able to remove CO from the atmosphere during the night, and of Heyne in 1815 (see Wolf, 1960) that organic acids accumulate in the leaves of *Bryophyllum calycinum* during the night, the two main aspects of CAM, diurnal CO gas exchange and metabolism of malic acid, have first been studied nearly independently. Hence, it is not surprising that most research to elucidate the mechanism of CAM has been during the last 15 years since CO exchange and malate metabolism were studied and interpreted in its context. These efforts

finally resulted in a clear realization that the CAM phenomenon is a variation on the mode of how plants can photosynthetically harvest CO₂ from the atmosphere. The interpretation of CAM in this sense was stimulated by the discovery of another variant of photosynthesis, the C₄-pathway (see Black, 1973; Hatch and Slack, 1970; Hatch, 1976). Because this newly discovered photosynthetic pathway is recognized to be very closely related to the CAM pathway, the work on the latter became intensified during these last years. Although the only publication with a realistic claim to the title "The plant diversity of Malesia" is *Flora Malesiana* itself, we have hesitatingly chosen this title for the present proceedings volume. Past, present and future work on the *Flora Malesiana* project was the subject of a successful symposium held in August 1989. This book contains only a selection of the papers presented at that meeting, yet it covers a much greater diversity of themes than just the inventory of botanical diversity. It even goes beyond the boundaries of the vast *Flora Malesiana* region in several of its chapters. The role of the founder of the *Flora Malesiana* Project, Professor C.G.G.J. van Steenis, repeatedly recurs in several chapters; not only as director of and contributor to the project, but also as a pioneer in the fields of Malesian vegetation, conservation and biogeography, and as an enlightened systematist whose ideas and practical recommendations for taxonomic delimitation still largely apply. Botanical information made available in regional and local floras is of vital importance for applications such as the exploitation of natural forests on a sustainable

yield basis. for establishing gene banks for the benefit of agriculture. forestry and horticulture. and not in the least for nature conservation. Several chapters are devoted to these themes. Floristic studies are also at the basis of the biogeographical essays and vegetation studies included in this book. • Best Selling Book in English Edition for RBI Assistant Mains Exam with objective-type questions as per the latest syllabus given by the RBI. • Compare your performance with other students using Smart Answer Sheets in EduGorilla's RBI Assistant Mains Exam Practice Kit. • RBI Assistant Mains Exam Preparation Kit comes with 18 Tests (8 Full-length Mock Tests + 10 Sectional Tests) with the best quality content. • Increase your chances of selection by 14X. • RBI Assistant Mains Exam Prep Kit comes with well-structured and 100% detailed solutions for all the questions. • Clear exam with good grades using thoroughly Researched Content by experts. The present book is the author's third on the subject of vertical seismic profiling (VSP). Ten years have elapsed since the publication of the first book. During this period, VSP has become the principal method of seismic observations in boreholes and the chief method of experimental studies of seismic waves in the real earth. VSP combines borehole studies in the seismic frequency band, well velocity surveys, proximity or aplanatic surveys, all of which previously existed as separate

methods. The high effectiveness of VSP, its great practical value, the express nature and clarity of the results obtained have all contributed towards a very rapid acceptance of the method. In the USSR VSP has been used in an overwhelming majority of areas and is being used increasingly in many foreign countries as well. This has been greatly facilitated by the translation into English and the publication in the U. S. A. by the Society of Exploration Geophysicists of the book Vertical Seismic Profiling (Tulsa, Oklahoma, 1974). As the method has become more familiar, it has attracted growing interest outside the USSR. This has been substantiated by the special seminar on VSP (Oklahoma, 1979) which was organized for 22 U. S. companies and universities and presented by the author.

At the present time, over 50% of children with this disease will be alive and free of their disease at least 5 years from the time of their initial diagnosis. Although a number of factors have contributed to this improvement, perhaps none has been as important as the institution of central nervous system preventive therapy (eNS prophylaxis). However, despite the efficacy of eNS prophylaxis, the prevention and treatment of central nervous system leukemia continues to pose a formidable clinical challenge to the pediatric oncologist. Although successful in most cases, eNS preventive therapy remains ineffective for a small but significant subset of patients at high risk for developing eNS disease. Moreover, it has become increasingly evident that some methods of eNS preventive therapy are associated with long-term, adverse eNS sequelae. Thus, considerable controversy exists regarding the optimal method of eNS prophylaxis. Treatment of the patient who develops overt meningeal leukemia has not been as successful and continues to pose a major clinical challenge. Despite the ability of intrathecal chemotherapy and/or radiation therapy to induce eNS remission, most patients suffer subsequent relapse and ultimate survival is usually significantly compromised. It is evident that newer approaches to treatment for this patient group must be identified before major improvement for this patient group is likely to occur.
