Introduction to Business covers the scope and sequence of most introductory business courses. The book provides detailed explanations in the context of core themes such as customer satisfaction, ethics, entrepreneurship, global business, and managing change. Introduction to Business includes hundreds of current business examples from a range of industries and geographic locations, which feature a variety of individuals. The outcome is a balanced approach to the theory and application of business concepts, with attention to the knowledge and skills necessary for student success in this course and beyond. One of the greatest strengths of business ethics research lies in the diversity of backgrounds of those interested in knowing more about it. Where else could we find moral philosophers, industrial psychologists, political scientists, and organizational sociologists hard at work exploring the same issues? These scholars bring to the table an intriguing mix of skills and viewpoints, many of which may be quite different from--and complementary to--those trained in functional areas of business-like management. However, this diversity also reflects a weakness. Researchers from such different backgrounds may be either unable or unwilling to talk to and work with each other in understanding more about these issues. This book bridges the gap and provides a basic reference volume for current business ethics researchers. Second, it stimulates new ways of thinking about, and creating interest in, linking management and ethics among those researchers. Third, it triggers management and ethics researchers who do not currently study business ethics problems to consider the implications of each to their current interests. The central theme of the book is that efforts must be made to better integrate management and ethical theory. Although the market contains a number of good business ethics books, none combines management theory with ethical theory on a chapter-by-chapter, topic-by-topic basis. This book bridges the theoretical, empirical, and at times practical gap between management and ethical scholars.
