The only problem with that was that the moment they had eaten those berries, they started to grow more frisky. So he decided to experiment a little. There was this old ewe, almost on her last legs. So he fed her some of those brown berries, and then spend the whole day, trying to capture her. He sat down on a rock and began to think. If this is the effect that these beans had on an old ewe, could it have a similar rejuvenating effect upon his own father? So he collected some of the berries, and asked his woman to brew them in water. This brew was then given to his old ailing father. And then the whole village spent the whole day trying to capture the father, who was under the influence of a caffeine high. Naturally, the father came down with a bump after the high was over and was sick for the next week. However, the Ethiopians found that this berry been drunk in moderate quantities was enough to rejuvenate them and give them a kick. And so kafe from the Kaffa region or the beans of Coffea arabica, which was first indigenous but then was slowly and steadily spread all over the world became one of the most popular brews drunk by mankind after water and tea.

Coffee Is Not Forever Jun 05 2021 The global coffee industry, which fuels the livelihoods of farmers, entrepreneurs, and consumers around the world, rests on fragile ecological foundations. In *Coffee Is Not Forever*, Stuart McCook explores the transnational story of this essential crop through a history of one of its most devastating

diseases, the coffee leaf rust. He deftly synthesizes agricultural, social, and economic histories with plant genetics and plant pathology to investigate the increasing interdependence of the world's coffee-producing zones. In the process, he illuminates the progress and prognosis of the challenges—especially climate change—that pose an existential threat to a crop that global consumers often take for granted. And finally, in putting a tropical plant disease at the forefront, he has crafted the first truly global environmental history of coffee, pushing its study and the discipline in bold new directions.

*Coffeeland* Jan 20 2020 A New York Times Book Review Editors' Choice "Extremely wide-ranging and well researched . . . In a tradition of protest literature rooted more in William Blake than in Marx." —Adam Gopnik, *The New Yorker* The epic story of how coffee connected and divided the modern world Coffee is an indispensable part of daily life for billions of people around the world. But few coffee drinkers know this story. It centers on the volcanic highlands of El Salvador, where James Hill, born in the slums of Manchester, England, founded one of the world's great coffee dynasties at the turn of the twentieth century. Adapting the innovations of the Industrial Revolution to plantation agriculture, Hill helped turn El Salvador into perhaps the most intensive monoculture in modern history—a place of extraordinary productivity, inequality, and violence. In the process, both El Salvador and the United States earned the nickname "Coffeeland," but for starkly different reasons, and with consequences that reach into the present. Provoking a reconsideration of what it means to be connected to faraway people and places, *Coffeeland* tells the hidden and surprising story of one of the most valuable commodities in the history of global capitalism.

As the scope of coffee culture continues to expand, *Uncommon Grounds* remains more than ever a brilliantly entertaining guide to the currents of one of the world's favorite beverages.

**The Romance of Indian Coffee** Sep 08 2021 Since Coorg is the biggest grower of coffee in India, I zeroed in on the subject of coffee. During my youth in Coorg, I was fascinated by the legend of Mr Ivor Bull, a pioneer planter and the founder of the Consolidated Coffee Estates Ltd., Pollibetta. Though Mr Bull had returned to England in 1954, he had become part of the local 'coffee folklore' and was remembered with affection by the local planters. Rightly so, because it was Mr Bull who had encouraged the Coorg planters to grow oranges, cardamom and pepper along with coffee. The inter-planting vastly improved the economic condition of the small planters. I did not want to focus my writing on the cultivation of coffee because coffee has been grown in

India as a commercial crop for nearly two centuries and planters are familiar with it. In this book, I have tried to give the reader, the coffee grower and the coffee lover in particular, an insight into the romance of coffee – it's fascinating history, many charming facets of coffee culture, its symbiosis with nature and what makes it such a captivating brew. This book was produced with ePustaka - Ink and Weave initiative by Techfiz Inc (<https://techfiz.com>).

*Plantation Coffee in Jamaica, 1790-1848* Dec 31 2020 *Plantation Coffee in Jamaica, 1790-1848* is the first comprehensive history of the Jamaican coffee industry, covering a period of rapid expansion and decline. The primary objective is to examine the structure and performance of the industry and to demonstrate the extent to which it contributed to the diversity of the Jamaican economy and society in this period. All of this is examined within the context of a period characterized by significant structural shifts in the then emerging global economy. As a work in economic history, the book is based on solid archival research and econometric analysis. Kathleen E.A. Monteith examines the changing levels of production, trade, productivity, and profitability of the industry and discusses the people involved in the industry, both free and enslaved. A demographic profile of the coffee planters and their familial relationships is established. The work experience of the enslaved men, women and children in the coffee industry, their organization, the nature of their works and their resistance to enslavement are also discussed. The clash of interests between the former enslaved people and coffee planters with respect to labour availability in the industry in the immediate post-slavery period are discussed also. Throughout the book, wherever

possible, comparisons are made with other sectors of the Jamaican economy, especially with the sugar industry. Differences are explained in terms of environment, scale and the nature of production. *Plantation Coffee in Jamaica, 1790-1848* contributes fresh material and interrogates data in systematic ways not previously undertaken by scholars in this area. Strikingly original are the sections dealing with the backgrounds of the coffee planters, drawing on sources only recently available for exploitation, notably the Legacies of British Slave-Ownership database, family history and genealogical websites, and the sections dealing with profitability. This book compares well with other works in Caribbean history published at this level of scholarship. It has no immediate rivals in its specific field.

**A Model of Technological Adoption for the Coffee Growers in Southern Minas Gerais State, Brazil** Jun 24 2020 The goal of this study is to develop a model for farmers' adoption behavior, in which the farmer's entrepreneurial attributes and the adoption act are considered as intervening variables in the process. The rationale for the model derives from Parson's social-action theory and an objective course of behavior is elaborated through some concepts considered at a level intermediate

between the abstract concepts and the empirical indicators.

Coffee and Transportation in Nicaragua Aug 27 2020 The development and extension of commercial coffee cultivation in Nicaragua has been related closely to advancements in the transportation system of the country. Although transportation improvement has substantially facilitated the expansions of commercial export agriculture, it has been fully effective only where fertile soil, proper climate, appropriate technology, and a demand for the product have been present in optimal combination. It is often assumed that the introduction of large-scale commercial agriculture to an area of inadequate transportation will inevitably lead to transport development. However, this assumption is not supported by the history of coffee-growing in Nicaragua.

I think it would be enjoyable for an obsessed coffee geek or someone who just enjoys their java.' (Amazon customer) For everyone who wants to understand more about coffee and its wonderful nuances and possibilities, this is the book to have. Coffee has never been better, or more interesting, than it is today. Coffee producers have access to more varieties and techniques than ever before and we, as consumers, can share in that expertise to make sure the coffee we drink is the best we can find. Where coffee comes from, how it was harvested, the roasting process and the water used to make the brew are just a few of the factors that influence the taste of what we drink. Champion barista and coffee expert James Hoffmann examines these key factors, looking at varieties of coffee, the influence of terroir, how it is harvested and processed, the roasting methods used, through to the way in which the beans are brewed. Country by country - from Bolivia to Zambia - he then identifies key characteristics and the methods that determine the quality of that country's output. Along the way we learn about everything from the development of the espresso machine, to why strength guides on supermarket coffee are really not good news. This is the first book to chart the coffee production of over 35 countries, encompassing knowledge never previously published outside the coffee industry.
